Strategy and Dynamics in Contests Kai A. Konrad 2009-03-05 The theory of contests looks at a number of competitions, from advertising to sports to war, in which any energy expended or money spent by the participants is unrecoverable regardless of the outcome. This book provides an introduction to the contest theory literature and describes the common properties and laws that govern these contests.

International Handbook of Public Procurement Khi V. Thai 2008-08-28 Since the 1990s, government at all levels is under increasing pressure to do more with less. However, despite the U.S. government spending about 15 to 20 percent of its GDP on contracts for goods and services, there is a paucity of reference books for public procurement officials and very few textbooks for courses on the subject. Filling this void, the International Handbook of Public Procurement provides the knowledge necessary to understand how procurement works and how to improve the cost-effectiveness of procurement systems. Taking a multidisciplinary approach, the book focuses on the managerial, economic, political, and legal aspects of this topic. It begins with a conceptual framework and highlights various reforms occurring in certain countries. By examining these improvements, readers are able to apply this knowledge to their own strategies. The next section presents selected cases that illustrate the public procurement process, examining systems in various nations including Germany, China, South Africa, Cambodia, Uganda, and Estonia. The book also discusses the rise of electronic procurement systems (E-procurement) and reviews the benefits of these efficient systems. Other topics presented in this comprehensive volume include practical discussions on contract negotiations, bidding, price strategies and cost analysis, and an insightful chapter on the market's response to contract award announcements. A virtual encyclopedia from numerous international experts, this book was assembled by Khi V. Thai, Professor at Florida Atlantic University and Editor of the Journal of Public Procurement. Dr. Thai has provided technical assistance in the area of public procurement to governments across the world. Empowering those on all sides of the issue, this volume dispenses advice valuable to government officials and contractors, as well as providing a comprehensive text for public administration students.

Auctioning Public Assets Maarten Christiaan Wilhelmus Janssen 2004 In many countries all over the world, governments are privatising firms that were previously under public control. This is happening, for example, in public utility sectors such as gas, water and electricity, in transport sectors (such as rail and metro) and in radio and telephony. This book provides an overview of the economic issues that are involved in this transfer of ownership of public assets. Combining a theoretical framework with a set of case studies of recent sales of state-owned assets from Europe and the USA, it asks which sort of allocation mechanism can a government adopt? Which is most suited to a particular sale? And how will the choice of allocation mechanism affect future market outcomes? With contributions from international experts, this book offers an accessible introduction to auction theory and an invaluable, non-technical analysis of existing knowledge. It will be of interest to students, non-specialists and policy-makers alike.
