Margaret Harris 2024-11-15

Now in its second edition, this fundamental undergraduate textbook provides students with everything they need when studying developmental psychology. Thoroughly revised, this book breaks down key topics into easily accessible concepts and provides students with both an overview of traditional research and theory as well as an insight into the

latest research findings and techniques. Taking a chronological approach, the key milestones from birth to adolescence are highlighted and clear links between changes in behaviour and developments in brain activity are made. A new chapter provides a global perspective on development, including findings regarding children's motor, cognitive, literacy, social and emotional development, as well as the importance of cross-cultural studies and their challenges. Each chapter also highlights both typical and atypical developments, as well as discussing and contrasting the effects of genetic and environmental factors. This textbook comes with a wealth of carefully updated pedagogical features, designed to help students engage with the material, including:

- Learning objectives for every chapter
- Key term definitions
- Over 100 colour illustrations
- Chapter summaries
