May 2, 2026 · A real function is said to be differentiable at a point if its derivative exists at that point. We introduce the notion of differentiability, discuss the differentiability of standard functions and examples of non-differentiable behavior. We then describe differentiability of a function of two ... In mathematics, a differentiable function of one real variable is a function whose derivative exists at each point in its domain. In other words, the graph of a differentiable function has a non-vertical tangent ... A function is said to be differentiable if the derivative of the function exists at all points in its domain. Particularly, if a function  $f(x)$  is differentiable at  $x = a$ , then  $f'(a)$  exists in the domain. In calculus, a differentiable function is a continuous function whose derivative exists at all points on its domain. Differentiable means that the derivative exists ... Example: is  $x^2 + 6x$  differentiable? Derivative rules tell us the derivative of  $x^2$  is  $2x$  and the derivative of  $x$  is  $1$ , so: Its derivative is  $2x + 6$ . So yes!  $x^2 + 6x$  ... Explain when a function of two variables is differentiable. Use the total differential to approximate the change in a function of two variables. When working with a function  $y = f(x)$  of one variable, the ... Differentiability is the foundation of calculus. When a function is differentiable, you can find its instantaneous rate of change, build tangent-line approximations, and apply powerful theorems like ... If a function is differentiable at  $x = c$ , then it is continuous at  $x = c$ . However, a function being continuous does not guarantee that it is differentiable, as demonstrated with an absolute value function. Dec 21, 2020 · This section has given us a formal definition of what it means for a function to be "differentiable," along with a theorem that gives a more accessible understanding.
