Computer Algebra R. Albrecht 2013-06-29 The journal *Computing* has established a series of supplement volumes the fourth of which appears this year. Its purpose is to provide a coherent presentation of a new topic in a single volume. The previous subjects were *Computer Arithmetic* 1977, *Fundamentals of Numerical Computation* 1980, and *Parallel Processes and Related Automata* 1981; the topic of this 1982

Supplementum to *Computing* is *Computer Algebra*. This subject, which emerged in the early nineteen sixties, has also been referred to as "symbolic and algebraic computation" or "formula manipulation". Algebraic algorithms have been receiving increasing interest as a result of the recognition of the central role of algorithms in computer science. They can be easily specified in a formal and rigorous way and provide solutions to problems known and studied for a long time. Whereas traditional algebra is concerned with constructive methods, computer algebra is furthermore interested in efficiency, in implementation, and in hardware and software aspects of the algorithms. It develops that in deciding effectiveness and determining efficiency of algebraic methods many other tools - recursion theory, logic, analysis and combinatorics, for example - are necessary. In the beginning of the use of computers for symbolic algebra it soon became apparent that the straightforward textbook methods were often very inefficient. Instead of turning to numerical approximation methods, computer algebra studies systematically the sources of the inefficiency and searches for alternative algebraic methods to improve or even replace the algorithms.

Climate Security Intelligence Adrian Wolfberg 2025-05-24 Climate security intelligence is the capacity to warn national and sub-national security organizations of the

physical effects of climate change that can have a negative societal effect on nations, governments, and their populations. This book discusses the uniqueness of climate security intelligence, the maturity of its development as a knowledge domain, and its possible future. Written by an intelligence analyst with over forty years of experience, this book centers upon the challenges that organizations may face when analysts, their managers, and their organizations are given the task of warning policymakers and decision-makers about threats to climate security. Taking a necessarily transdisciplinary approach, this book will be of interest to a wide audience of students, researchers, practitioners, and policy-makers concerned with how the impacts of climate change affect the social, cultural, political, and economic stability of national interests.

ECOOP 2005 - Object-Oriented Programming
Andrew Black 2005-07-18 The 19th Annual Meeting of the European Conference on Object-Oriented Programming—ECOOP 2005—took place during the last week of July in Glasgow, Scotland, UK. This volume includes the refereed technical papers presented at the conference, and two invited papers. It is traditional to preface a volume of proceedings such as this with a note that emphasizes the importance of the conference in its respective field. Although such self-evaluations should always be taken with a large grain of salt, ECOOP is undisputedly the pre-eminent conference on object-orientation outside of the United States. In its turn, object-orientation is today's principal technology not

only for programming, but also for design, analysis and specification of software systems. As a consequence, ECOOP has expanded far beyond its roots in programming to encompass all of these areas of research—which is why ECOOP has remained such an interesting conference. But ECOOP is more than an interesting conference. It is the nucleus of a technical and academic community, a community whose goals are the creation and dissemination of new knowledge. Chance meetings at ECOOP have helped to spawn collaborations that span the boundaries of our many subdisciplines, bring together researchers and practitioners, cross cultures, and reach from one side of the world to the other. The ubiquity of fast electronic communication has made maintaining these collaborations easier than we would have believed possible only a dozen years ago. But the role of conferences like ECOOP in establishing collaborations has not diminished.

The Essentials of Knowledge Management

John S. Edwards 2016-04-29 This book reviews the field of Knowledge Management, taking a holistic approach that includes both "soft" and "hard" aspects. It provides a broad perspective on the field, rather than one based on a single viewpoint from Computer Science or Organizational Learning, offering a comprehensive and integrated conception of Knowledge Management. The chapters represent the best Knowledge Management articles published in the 21st century in Knowledge Management Research & Practice and the European Journal of Information Systems, with contributors including Ikujiro Nonaka, Frada Burstein, and David Schwartz. Most of the chapters contribute significantly to practice as well as theory. The OR Essentials series presents a unique cross-section of high quality research work fundamental to understanding contemporary issues and research across a range of Operational Research topics. It brings together some of the best research papers from the highly respected

journals of the Operational Research Society, also published by Palgrave Macmillan.
