Quality by Design for Biopharmaceutical Drug Product Development

Feroz Jameel 2015-04-01 This volume explores the application of Quality by Design (QbD) to biopharmaceutical drug product development. Twenty-eight comprehensive chapters cover dosage forms, liquid and lyophilized drug products. The introductory chapters of this book define key elements of QbD and examine how these elements are integrated into drug product development. These chapters also discuss lessons learned from the FDA Office of Biotechnology Products pilot program. Following chapters demonstrate how QbD is used for formulation development ranging from screening of formulations to developability assessment to development of lyophilized and liquid formats. The next few chapters study the use of small-scale and surrogate models as well as QbD application to drug product processes such as drug substance freezing and thawing, mixing, sterile filtration, filling, lyophilization, inspection and shipping and handling. Later chapters describe more specialized applications of QbD in the drug product realm. This includes the use of QbD in primary containers, devices and combination product development. The volume also explores QbD applied to vaccine development, automation, mathematical modeling and monitoring, and controlling processes and defining control strategies. It concludes with a discussion on the application of QbD to drug product technology transfer as well as overall regulatory considerations and lifecycle management. Quality by Design for Biopharmaceutical Drug Product Development is an authoritative resource for scientists and researchers interested in expanding their knowledge on QbD principles and uses in creating better drugs.

Distributed Computer Control Systems 1997 I.M. MacLeod 1998-01-15 It is increasingly accepted that future dependable, real-time digital computer control systems will have distributed architectures.

Advantages of distributed computer control systems include the possibility of composing large systems out of pre-tested components with minimal integration effort, their well-defined fault containment properties and their capacity to make effective use of mass-produced silicon chips. The IFAC Workshop series on Distributed Computer Control Systems (DCCS) focuses on design requirements and fundamental principles encountered in such systems and highlights and traces the growth of key concepts at their various stages of development. Theoretical and application-oriented viewpoints receive equal emphasis. These Workshops also provide an excellent forum for the exchange of information on recent technological advances and practices in the distributed computer control field. The 1997 DCCS Workshop was notable for the attention given to practical implementations of ideas that have been under discussion for decades and maintained the high technical standard set by previous Workshops in the series - the policy of concentrating on a specific topic, inviting a number of key authors and of accepting only a limited number of papers paid dividends.

Contemporary Systems Analysis Marvin Gore 1994 The philosophy of Marvin Gore and John Stubbe has always been to give students a solid foundation for applying learned techniques in the development of a computer information system. The goal of Contemporary Systems Analysis, 5/e is to maintain the integrity and tradition of the Gore/Stubbe style, while strengthening the coverage of current technology and trends in the field. Contemporary Systems Analysis presents a balanced approach to the four phases of the systems development life cycle (SDLC): analysis, design, development, and operation. As indicated by the change in the title, this edition acknowledges the effects of current technology on systems development and includes coverage of the latest trends, approaches, and software. CASE tools are integrated with the traditional, thorough presentation that is the trademark of the Gore/Stubbe text.

Control System Migrations Daniel Roessler 2013-08-29 This new book, by the original developer of the BACnet standards, explains how BACnet's protocols manage all basic building functions in a seamless, integrated way. BACnet is a data communication protocol for building automation and control systems, developed within ASHRAE in cooperation with ANSI and the ISO. This book explains how BACnet works with all major control systems—including those made by Honeywell, Siemens, and Johnson Controls—to manage everything from heating to ventilation to lighting to fire control and alarm systems. BACnet is used today throughout the world for commercial and institutional buildings with complex mechanical and electrical systems. Contractors, architects, building systems engineers, and facilities managers must all be cognizant of BACnet and its applications. With a real 'seat at the table,' you'll find it easier to understand the intent and use of each of the data sharing techniques, controller requirements, and opportunities for interoperability between different manufacturers' controllers and systems. Highlights include: * A review of the history of BACnet and its essential features, including the object model, data links, network technologies, and BACnet system configurations; * Comprehensive coverage of services including object access, file access, remote device management, and BACnet-2012's new alarm and event capabilities; * Insight into future directions for BACnet, including wireless networking, network security, the use of IPv6, extensions for lifts and escalators, and a new set of BACnet Web Services; * Extensive reference appendices for all objects and services; and * Acronyms and abbreviations

Final evaluation of "Disposal of persistent organic pollutants and obsolete pesticides in Mozambique" Food and Agriculture Organization of the United Nations 2020-02-25 Pesticides have helped control disease and increase crop production for food security. However poor management of pesticides has shown negative impacts human health and the environment, including death and disability among users. Of particular concern are Persistent Organic Pollutants (POPs) that are highly effective in the control of the insect vectors of malaria and sleeping sickness and locusts. FAO supported by GEF implemented a POPs project in Mozambique to safeguard and dispose existing stocks of obsolete pesticides, as well as working to reduce risk across the pesticide lifecycle at the policy level. The evaluation found that the project was successful in safeguarding POPs, pesticide waste and contaminated containers, and had to deal with a much larger quantity of contaminated soil and obsolete pesticides than initially planned. In the future, the evaluation recommends that the Project Steering Committee with the support of FAO should (i) continue the remediation of highly contaminated sites, (ii) establishment of a sustainable system for managing empty pesticide containers, and (ii) establishment of a national pesticide stock management system.
