2020-03-20 The essential learning of real-world accounting problems made simple. 'Everything a non-specialist accounting student needs. This latest edition is comprehensive, well-structured, easy to follow and contains plenty of all-important practice questions plus

additional online resources.' David Gilding, Programme Director, Business Management, Lifelong Learning Centre, University of Leeds For undergraduate and graduate Accounting courses as part of non-Accounting programmes. Accounting for Non-Accounting Students, 10th edition, by Dyson and Franklin, provides a real-life understanding of the subject by introducing you to the purpose and key ideas of financial and management accounting, whether you have little or no previous knowledge of the subject. Renowned for its clear and non-technical explanations of essential accounting techniques, the textbook uses simple language accessible to all. Its engaging content will help you cross the bridge between classroom learning and real life to improve your employment prospects when applying for jobs. Key and new features include: New - critical thinking questions related to the most recent news stories. Up-to-date, real company information and reports, with

examples included. A companion website with additional learning resources to practice and improve your understanding of the essential accounting concepts. A glossary with nearly 100 key accounting definitions related to concepts and terms. Along with contemporary examples and business articles, this textbook will allow you to explore, individually and within the classroom discussions, themes that go beyond the standard accounting techniques, challenging you to think and develop your knowledge and critical thinking skills around the subject.

A Textbook of Cost and Management Accounting, 10th Edition Arora M.N. 2012 A Textbook of Cost and Management Accounting provides the students with thorough grounding in cost concepts, cost behaviour and methods, and techniques of cost and management accounting with an understanding of the uses and limitations of cost and financial data for managerial operations.

The text of the subject matter has been presented in a student-friendly, simple and intelligible manner. Every discussion involving conceptual complexity is immediately illustrated by a numerical example. In addition, the book contains a liberal sprinkling of charts and diagrams so as to make the subject easily understandable and highlight its finer points. The subject matter has been organized on 'first things first' basis for its logical presentation that sustains interest. The approach of the book is examination oriented. Thus, a good number of problems and solutions have been included in its chapters. Theoretical and numerical questions have been mostly selected from various examinations. Objective type questions have been given to serve as self test by students. This is an ideal book for self study. New to this edition • All chapters thoroughly revised • Latest information on Cost Accounting Standards (CAS) issued by the Institute of Cost Accountants of India (ICAI) •

Chapter on 'Miscellaneous Topics' made more contemporary by including some new sub-topics, and thus re-named 'Advanced Cost Management Techniques' • Revision and augmentation of practical problems

Thoroughly updated in 2017, 10e builds on the strengths of previous editions and continues to provide a thorough understanding of how to use accounting information to analyze business performance and make business decisions.

Uses real companies to illustrate many of the accounting concepts, and covers a variety of issues associated with these actual businesses to provide a real-world perspective. Combines solid coverage of financial accounting for business students, regardless of the

selected major, and provides non-accounting majors a solid foundation for making effective use of accounting information.
