Ketamine-Assisted Psychotherapy Clinical Documentation

Handbook Godfrey Hayden Jensen Every ketamine clinic in the country needs standardized documentation, and most are operating without it. As KAP expands into a \$3.4 billion market with over 1,500 clinics nationwide, regulatory scrutiny is intensifying. DEA audits target controlled substance records. Malpractice claims focus on screening gaps and monitoring failures. Insurance denials pile up when billing documentation is incomplete. The clinical work may be excellent, but if the paperwork cannot prove it, the practice is exposed. A Complete Clinical Documentation System Built for KAP This toolkit provides more than 75 reproducible clinical forms, templates, logs, and checklists covering every phase of ketamine-assisted psychotherapy, from initial screening through long-term follow-up. Each form includes clinical rationale, documentation guidance, and real-world examples showing how the documentation functions in practice. The system is designed for nurse practitioners, PMHNPs, psychiatrists, licensed therapists, and clinic administrators who deliver or manage KAP services. Screening and Intake Documentation Medical eligibility screening with cardiovascular, hepatic, renal, and psychiatric risk assessment forms. Baseline symptom severity tracking using PHQ-9, GAD-7, PCL-5, C-SSRS, and CADSS-6. Layered informed consent templates addressing off-label use, route-specific risks, and telehealth addenda. Prior treatment failure documentation formatted for insurance justification. Session Documentation for Every Route Route-specific dosing records for sublingual, intramuscular, and intravenous ketamine. Real-time vital signs monitoring logs at 15-minute intervals. Adverse event tracking with rescue medication administration logs. Therapist observation templates and dosing-integration linkage forms that connect session content to therapeutic progress. DEA Compliance and Audit Readiness Ketamine inventory logs with running balance tracking. Drug waste documentation with witness protocols. Biennial DEA inventory templates. PDMP check logs. Storage security checklists. A comprehensive self-audit checklist mirroring the DEA inspection sequence. NDC codes, J-codes, and 2026 modifier references including the mandatory -JW and -JZ hard-stop enforcement. Billing, Telehealth, and Special Populations Time-based E&M documentation templates and MDM guides. Superbill generation templates with correct CPT and HCPCS codes. Telehealth-specific forms for at-home sublingual KAP including environmental safety assessment, remote vital signs logs, and sitter verification. Documentation addenda

for older adults, trauma survivors, substance use disorder comorbidity, personality disorders, palliative care, eating disorders, and group KAP formats. Two Complete Sample Cases Appendices include two fully worked documentation examples showing every form completed from screening through follow-up: one sublingual telehealth patient and one intramuscular in-clinic patient. Plus blank reproducible copies of every form organized by treatment phase. Built for the clinical realities of 2026 KAP practice, this toolkit addresses the documentation gap that no EHR template, training program, or clinical manual currently fills.

Information Systems for Patient Care B. I. Blum 1984-04-30

Computer technology has impacted the practice of medicine in dramatic ways. Imaging techniques provide non-evasive tools which alter the diagnostic process. Sophisticated monitoring equipment presents new levels of detail for both patient management and research. In most of these high technology applications, the computer is embedded in the device; its presence is transparent to the user. There is also a growing number of applications in which the health care provider directly interacts with a computer. In many cases, these applications are limited to administrative functions, e.g., office practice management, location of hospital patients, appointments, and scheduling. Nevertheless, there also are instances of patient care functions such as results reporting, decision support, surveillance, and reminders. This series, Computers and Medicine, will focus upon the direct use of information systems as it relates to the medical community. After twenty-five years of experimentation and experience, there are many tested applications which can be implemented economically using the current generation of computers. Moreover, the falling cost of computers suggests that there will be even more extensive use in the near future. Yet there is a gap between current practice and the state-of-the-art.
