Basic Concepts of Chemistry Leo J. Malone

2008-12-03 Engineers who need to have a better understanding of chemistry will benefit from this accessible book. It places a stronger emphasis on outcomes assessment, which is the driving force for many of the new features. Each section focuses on the development and assessment of one or two specific objectives. Within each section, a specific objective is included, an anticipatory set to orient the reader, content discussion from established authors, and guided practice problems for relevant objectives. These features are followed by a set of independent

practice problems. The expanded Making it Real feature showcases topics of current interest relating to the subject at hand such as chemical forensics and more medical related topics.

Numerous worked examples in the text now include Analysis and Synthesis sections, which allow engineers to explore concepts in greater depth, and discuss outside relevance.

New Heavens and a New Earth Jeremy Brown

2013-05-03 In this ground-breaking study of the Jewish reception of the Copernican revolution, Jeremy Brown examines four hundred years of Jewish writings on the Copernican model. Brown shows the ways in which Jews ignored, rejected, or accepted the Copernican model, and the theological and societal underpinnings of their choices. Throughout *New Heavens and a New Earth* are deft historical studies of such colorful

figures as Joseph Delmedigo, the first Jewish Copernican and a student of Galileo's; Tuviah Cohen, who called Copernicus the "Son of Satan;" Zelig Slonimski, author of a collection of essays on Halley's Comet; and contemporary Jewish thinkers who use Einstein's Theory of Relativity to argue that the Earth does not actually revolve around the sun. Brown also provides insightful comparisons of concurrent Jewish and Christian writings on Copernicus, demonstrating that the Jewish reception of Copernicus was largely dependent on local factors and responses. The book concludes with the important lessons to be learned from the history of the Jewish reception of Copernican thought, and shows how religions make room for new scientific descriptions of reality while upholding their most cherished beliefs.

measurements, usually in the form of a computer database, to emphasize spatial themes, entities, and relationships; operate upon these representations to produce more measurements, and to discover new relationships by integrating disparate sources; and, transform these representations to conform to other frameworks of entities and relationships. These activities reflect the larger context, such as institutions and cultures, in which these people carry out their work. In turn, the GIS may influence these structures. This text provides the comprehensive coverage you will need to master this powerful new technology.
