Creating Standards-Based Integrated

Curriculum Susan M. Drake 2012-05-08

Translate the new standards into meaningful curriculum! The Common Core State Standards offer a shared language that ensures consistency and accountability, while also giving you the flexibility to design a curriculum that's right for your students. Of course, knowing what you need to teach doesn't tell you how to teach it—and that's where curriculum integration expert Susan M. Drake comes in. In this new edition of her classic text, Drake applies the essential principles of standards-based curriculum, instruction, and assessment to today's unique challenges. Focusing on multidisciplinary, interdisciplinary, and transdisciplinary approaches, she provides guidance on Unpacking the Common Core State Standards Planning assessment tasks Designing instructional strategies Developing daily activities Helping students connect essential questions to enduring understandings Included are new examples of exemplary programs, discussion questions, a sample completed interdisciplinary curriculum, and activity suggestions for building your own standards-based integrated curriculum. This proven resource is the road map teachers and curriculum developers need to navigate the unfamiliar territory of the CCSS and to develop a curriculum that helps their students thrive.

Big Ideas for Growing Mathematicians Ann Kajander 2007-08-01 Introducing sophisticated mathematical ideas like fractals and infinity, these hands-on activity books present concepts to children using interactive and comprehensible methods. With intriguing projects that cover a wide range of math content and skills, these are ideal resources for elementary school mathematics enrichment programs, regular classroom instruction, and home-school programs. Reproducible activity sheets lead students through a process of engaged inquiry with plenty of helpful tips along the way. A list of useful terms specific to each activity encourages teachers and parents to introduce students to the vocabulary of math. This second Big Ideas book covers more advanced concepts, with projects including "One in a Million," where children use grains of rice to model the probability of astronomical odds; "Triangular Tessellations," in which students investigate the geometry and variations created by repeating patterns; and "Fractions of Salaries," where kids use a real-world scenario to multiply and divide fractions.
