The Executive Brain Elkhonon Goldberg 2001 The Executive Brain is the first book to explore in popular scientific terms one of the most important and rapidly evolving topics in contemporary neuropsychology, the most "human" and recently evolved region of the brain--the frontal lobes. Crucial for all high-order functioning, it is only in humans that the frontal lobes are so highly developed. They hold the key to our judgment, our social and ethical behavior, our imagination, indeed, to our "soul." The author shows how the frontal lobes enable us to engage in complex mental processes, how vulnerable they are to injury, and how devastating the effects of damage often are, leading to chaotic, disorganized, asocial, and even criminal behavior. Made up of fascinating case histories and anecdotes, Goldberg's book offers a panorama of state-of-the-art ideas and

advances in cognitive neuroscience. It is also an intellectual memoir, filled with vignettes about the author's early training with the great Russian neuropsychologist A.R. Luria, Goldberg's escape from the Soviet Union, and his later interactions with patients and professionals around the world.

*Pharmacology* H. P. Rang 1991 Describes the mechanisms by which drugs act and relating these to their overall pharmacological effects and clinical uses. This new edition emphasizes the chemical structures of those drugs for which knowledge of structure-activity relationships enhances appreciation of how the drugs act.

**Biology of Sensory Systems** C. U. M. Smith 2008-11-20 Since publication of the first edition, huge developments have taken place in sensory biology research and new insights have been provided in particular by molecular biology. These show the similarities in the molecular architecture and in the physiology of sensory cells across species and across sensory modality and often indicate a common ancestry dating back over half a billion years. *Biology of Sensory Systems* has thus been completely revised and takes a molecular, evolutionary and comparative approach, providing an overview of sensory systems in vertebrates, invertebrates and prokaryotes, with a strong focus on human senses. Written by a renowned author with extensive teaching experience, the book covers, in six parts, the general features of sensory systems, the mechanosenses, the chemosenses, the senses which detect electromagnetic radiation, other sensory systems including pain, thermosensitivity and some of the minority senses and, finally, provides an outline and discussion of philosophical implications. New in this edition: Greater emphasis on molecular biology and intracellular mechanisms New chapter on genomics and sensory systems Sections on TRP channels, synaptic transmission, evolution of nervous systems, arachnid mechanosensitive sensilla and photoreceptors, electroreception in the Monotremata, language and the FOXP2 gene, mirror neurons and the molecular biology of pain Updated passages on human olfaction and gustation. Over four hundred illustrations, boxes

containing supplementary material and self-assessment questions and a full bibliography at the end of each part make *Biology of Sensory Systems* essential reading for undergraduate students of biology, zoology, animal physiology, neuroscience, anatomy and physiological psychology. The book is also suitable for postgraduate students in more specialised courses such as vision sciences, optometry, neurophysiology, neuropathology, developmental biology. Praise from the reviews of the first edition: "An excellent advanced undergraduate/postgraduate textbook." ASLIB BOOK GUIDE "The emphasis on comparative biology and evolution is one of the distinguishing features of this self-contained book. .... this is an informative and thought-provoking text..." **Atlas of Neuroanatomy for Communication Science and Disorders** Leonard L. LaPointe 2018-05-24 A beautifully illustrated atlas that provides robust speech-language pathology and audiology learning tools *Atlas of Neuroanatomy for Communication Science and Disorders*, Second Edition, is based on the award-winning textbook *Atlas of Anatomy* and the work of Michael Schuenke, Erik Schulte, and Udo Schumacher. The updated text reflects advances in neuroscience and invaluable insights from Leonard L. LaPointe, one of the foremost teachers and practitioners in the field of brain-based communication disorders today. The book features beautiful illustrations from the recently published second edition of the Schuenke atlases and new content on cognition, higher cortical function, the spinal cord, structural damage, and clinic-pathological effects. Divided into seven chapters, the book is presented in a logical framework, starting with a concise, illustrated overview of anatomy of the brain and nervous system. This approach ensures mastery of introductory concepts before readers move on to more advanced material. The text covers traditional acquired speech-language conditions such as aphasia and neuromotor speech disorders, cognition and swallowing disorders, communication impairments caused by traumatic brain injury, multisystem blast injuries, and degenerative disorders of the nervous system. Key Highlights More than 450 exquisitely rendered full-color illustrations

delineate basic anatomy and physiology, multiple visual perspectives, and impacted and interrelated body structures. Descriptive legends and text bridge the gap between neuroanatomic principles and clinical applications. Tables, charts, and concise text clearly detail the role of anatomical structures in normal communication and what happens when they dysfunction. This remarkable atlas is essential reading for graduate and undergraduate students in speech-language pathology, audiology, and communication sciences. It will also greatly benefit clinicians who need to understand the crucial connection between neuroanatomy and functional systems when treating people with communication disorders. It should be on the bookshelf of every practicing clinician or student who deals with brain-based disorders.

**The Central Nervous System of Vertebrates** Rudolf Nieuwenhuys 2014-11-14 This comprehensive reference is clearly destined to become the definitive anatomical basis for all neuroscience research. The book provides a complete overview and comparison of the

structural organization of all vertebrate groups, ranging from amphioxus and lamprey through fishes, amphibians and birds to mammals. The large specialised section of the work, devoted to the CNS of the various vertebrate groups, is preceded by introductory chapters on neurons, cell masses, fibre tracts, morphogenesis, methodology, and techniques. Although focusing on structure, the authors provide functional correlations throughout. This monumental work is, and will remain, unique; the only source of such brilliant illustrations at both the macroscopic and microscopic levels.
