### Advanced Manufacturing Processes VI Volodymyr Tonkonogyi

2025-02-13 This book offers a timely snapshot of innovative research and developments at the interface between design, manufacturing, materials, mechanical and process engineering, and quality assurance. It covers various manufacturing processes, such as grinding, turning, drilling, milling, broaching, and gear machining, including additive manufacturing, strengthening, electro-mechanical processing, vacuum technology, and deforming broaching. It focuses on computer and numerical simulation, mathematical and reliability modeling, and machine learning models for manufacturing systems and processes. It describes innovative cutting and abrasive processes and combined technologies. It also investigates the electrical resistance, self-sharpening effect, strengthening, heat treatment, surface peening, and heat resistance of various coatings and materials. Gathering the best papers presented at the 6th Grabchenko's International Conference on Advanced Manufacturing Processes (InterPartner-2024), held in Odesa, Ukraine, on September 10-13, 2024, this book provides a comprehensive and up-to-date examination of design, manufacturing, mechanical, materials, and process engineering, as well as quality assurance trends and technologies. It also aims to foster international and interdisciplinary communication and collaborations, offering a bridge between the academic and industrial sectors.

needed to perform CFD simulations using powerful commercial software

tools. The book focuses on fluid mechanics, heat transfer and chemical

reactions. To do so, the fundamentals of CFD are presented, with the

entire workflow broken into manageable pieces that detail geometry

preparation, meshing, problem setting, model implementation and post-

processing actions. Pathways for process optimization using CFD

integrated with Design of Experiments are also explored. The book's

combined approach of theory, application and hands-on practice allows

engineering graduate students, advanced undergraduates and industry

practitioners to develop their own simulations. - Provides the skills

needed to perform real-life simulation calculations through a

combination of mathematical background and real-world examples,

including step-by-step tutorials - Presents worked examples in complex

processes as combustion or gasification involving fluid dynamics, heat

and mass transfer, and complex chemistry sets
