Research Methods and Techniques in Architecture Elzbieta Danuta Niezabitowska 2018-07-11 A scientific approach to architectural and architectonic research from the scope of just one discipline is no longer sufficient. With contemporary considerations such as behavior, health, and environmental protection, architects and students alike need holistic research methodologies that incorporate qualitative elements as well as more traditional quantitative ones. *Research Methods and Techniques in Architecture* examines research methodologies and tools applied in science and architectonic practice. Beginning with a thorough introduction to the main scientific, environmental, and architectural theories of the late twentieth century, the book guides the reader through the different aspects of architectural research design, building research teams, choosing applicable research methods, and representing research results.

Landscape Architectural Research M. Elen Deming 2011-04-12 A practical, single-source guide to successful strategies for landscape architecture research As the scope of landscape architecture expands to engage with other disciplines, and streams of information directing this field continue to grow and diversify, it becomes increasingly important for landscape architects to be able to implement a range of effective research strategies when seeking, creating, and validating knowledge. *Landscape Architecture Research* offers a framework for advancing better design thinking solutions by supplying readers with a system of inquiry tactics that open up a wider range of research possibilities. With a logical and innovative approach that favors legitimacy of knowledge based on collective, grounded practices, rather than strict adherence to protocols drawn only from scientific models, this comprehensive, illustrated guide produces a sound argument for establishing a new paradigm for legitimizing research quality. *Landscape Architecture Research* presents: Case studies that show how the range of presented research strategies have been successfully used in practice New perspective on the relationship between theory, research, practice, and critique, a relationship that is specific to landscape architecture Detailed coverage of the ways that new knowledge is produced through research activities and practical innovations in landscape architecture The first and only book on this topic of growing importance in landscape architecture, *Landscape Architecture Research* keeps professionals and students in step with the latest developments in landscape architecture, and delivers a dynamic and flexible game plan for verifying the integrity of their work.

The Handbook of Interior Architecture and Design Graeme Brooker 2013-10-24 *The Handbook of Interior Architecture and Design* offers a compelling collection of original essays that seek to examine the shifting role of interior architecture and interior design, and their importance and meaning within the contemporary world. Interior architecture and interior design are disciplines that span a complexity of ideas, ranging from human behaviour and anthropology to history and the technology of the future. Approaches to designing the interior are in a constant state of flux, reflecting and adapting to the changing systems of history, culture and politics. It is this process that allows interior design to be used as evidence for identifying patterns of consumption, gender, identity and social issues. *The Handbook of Interior Architecture and Design* provides a pioneering overview of the ideas and arrangements within the two disciplines that make them such important platforms from which to study the way humans interact with the space around them. Covering a wide range of thought and research, the book enables the reader to investigate fully the changing face of interior architecture and interior design, while offering questions about their future trajectory.

Spatial Expeditions Architekturfakultät der Technischen Universität Graz 2024-03-18 Bilingual edition (English/German) / Zweisprachige Ausgabe (deutsch/englisch) Space is experienced not only visually, but with all the senses. Despite this, the design and reception of architecture often barely take haptic, acoustic, and olfactory perceptions into account. Consequently, in the architecture discipline there is no continuous discourse on the topic of spatial perception. GAM.13 *Spatial Expeditions* seeks to fill this gap. The method of the expedition enables an experimental approach and provides the opportunity to gain new insights and perspectives with regard to built space. It explores perceptual techniques from the fields of architecture, the visual arts, music, dance and other related disciplines. GAM.13 therefore represents an expedition into experimental architecture and the unexplored aspects of built space. The volume contains contributions by Sam Auinger, Irmgard Frank, Malcolm McCullough, Philippe Rahm, and Karen Van den Berg, among others.

Research Methods for Interior Design Dana E. Vaux 2020-08-05 Interior design has shifted significantly in the past fifty years from a focus on home decoration within family and consumer sciences to a focus on the impact of health and safety within the interior environment. This shift has called for a deeper focus in evidence-based research for interior design education and practice. *Research Methods for Interior Design* provides a broad range of qualitative and quantitative examples, each highlighted as a case of interior design research. Each chapter is supplemented with an in-depth introduction, additional questions, suggested exercises, and additional research references. The book's subtitle, *Applying Interiority*, identifies one reason why the field of interior design is expanding, namely, all people wish to achieve a subjective sense of well-being within built environments, even when those environments are not defined by walls. The chapters of this book exemplify different ways to comprehend interiority through clearly defined research methodologies. This book is a significant resource for interior design students, educators, and researchers in providing them with an expanded vision of what interior design research can encompass.

Case Study Strategies for Architects and Designers Marja Sarvimaki 2017-06-27 *Case Study Strategies for Architects and Designers* explains methods in evidence-based design, also called practice-based research, to show you the value of research to your designs. Topics covered pertain to data collection and analysis techniques, including surveys, interviews, fieldwork, participatory design, occupancy evaluations, and memory sketching. Integrative data evaluation, theoretical sampling, triangulation, pattern matching logic, and analytical generalization are also discussed. Global research precedents, exercises, further

reading, section summaries, sidebars, more than 30 black and white images and tables will help you conduct empirical inquiries in real-life contexts.

Research Methods for Architecture Ray Lucas 2016-01-18 While fundamentally a design discipline, architectural education requires an element of history and theory, grouped under the term 'research'. However, many students struggle with this part of their course. This practical handbook provides the necessary grounding in this subject, addressing essential questions about what research in architecture can be. The first part of the book is a general guide to the fundamentals of how to do research, from assembling a literature review to conducting an interview. The second section presents a selection of case studies dealing with such topics as environmental psychology, the politics of space, ethnographic research and mapping.

Research Methods for the Architectural Profession Ajla Aksamija 2021-03-03 Research Methods for the Architectural Profession introduces research as a systematic process, describes how to formulate research questions, provides an in-depth explanation of different research methods (qualitative, quantitative, and experimental), and explains how to select appropriate research methods and execute research studies. It describes the process of documentation, knowledge dissemination, and application of research results in architectural design and practice. Most importantly, it provides guidelines for integrating research into profession and uses extensive case-studies and practice-relevant examples to illustrate main concepts, procedures, and applications. Integrating research into practice is essential for developing new knowledge, solving design and technical problems, overcoming different types of challenges present in the contemporary profession, and improving the design outcomes. Innovation requires a much stronger correlation between research and design, and it is pertinent for the future of architectural practice that research becomes an integral part of architectural profession. This book provides a roadmap for successfully integrating research into architectural design and for establishing innovative practices, regardless of a firm's size. Written by an architecture professor with an extensive research and professional background—specifically focusing on integrating research into practice—and richly illustrated with over 150 color images, this reference will be useful for both students and practitioners.

Visual Research Methods in Architecture Igea Troiani 2021 This book offers a distinctive approach to the use of visual methodologies for qualitative architectural research. It presents a diverse selection of ways for the architect or architectural researcher to use their gaze as part of their research practice for the purpose of visual literacy. Its contributors explore and use 'critical visualizations', which employ observation and sociocultural critique through visual creations - texts, drawings, diagrams, paintings, visual texts, photography, film and their hybrid forms - in order to research architecture, landscape design and interior architecture. The visual methods intersect with those used in ethnography, anthropology, visual culture and media studies. In presenting a range of interdisciplinary approaches, Visual Methodologies in Architectural Research opens up territory for new forms of visual architectural scholarship

Architectural Research Methods Linda N. Groat 2002-02-11 This work offers a survey of architectural research methods - tools of technical, aesthetic, and environmental-behavioural inquiry that go into the creation of the built information. It covers methods such as quantitative and qualitative analysis.
