Stevens' Handbook of Experimental Psychology, Learning and Cognition

Richard C. Atkinson 1988 This is a new edition of the established reference and graduate text on experimental psychology. Widely used for over 25 years, this edition has been completely updated and expanded into two volumes; contributors to these works are among the most highly renowned professionals in the field. Volume 1 includes coverage of the physics and retinal physiology of vision; the

nature of auditory perception, speech, and emotional patterns; and the latest theories and findings in the area of behavioural genetics. Volume 2 includes studies exploring such topics as the psychobiology of learning and memory; the influences of choice and reinforcement in human behaviour; psycholinguistics; individual variations in cognitive functioning, and much more.

Arthur L. Costa 2000 Presents practical advice for using the "habits of mind"--Sixteen types of intelligent behavior--in the classroom, including discussion of their application to mathematics, art, foreign language, reading comprehension, and character instruction.

*The Development and Analysis of a Hierarchy of Learning Tasks Involved in the Concept of Slope* Glenn William Olsen 1968

*Is Conflict Adaptation an Illusion?* James R Schmidt 2015-05-20 Conflict adaptation

theory is one of the most popular theories in cognitive psychology. The theory argues that participants strategically modulate attention away from distracting stimulus features in response to conflict. Although results with proportion congruent, sequential congruency, and similar paradigms seem consistent with the conflict adaptation view, some researchers have expressed scepticism. The paradigms used in the study of conflict adaptation require the manipulation of stimulus frequencies, sequential dependencies, time-on-task regularities, and various other task regularities that introduce the potential for learning of conflict-unrelated information. This results in the unintentional confounding of measures of conflict adaptation with simpler learning and memory biases. There are also alternative accounts which propose that attentional adaptation does occur, but via different mechanisms, such as valence, expectancy, or effort. A significant (and often heated)

debate remains surrounding the question of whether conflict adaptation exists independent of these alternative mechanisms of action. The aim of this Research Topic is to provide a forum for current directions in this area, considering perspectives from all sides of the debate.

*Concept Mapping as an Assessment Tool for Conceptual Understanding in Mathematics* Haiyue JIN 2022-05-05 This book investigates the practicability and effectiveness of the concept map as a tool for assessing students' conceptual understanding in mathematics. The author first introduces concept mapping and then employs it to investigate students' conceptual understanding of four different mathematical topics. Alongside traditional scoring methods, she adopts Social Network

Analysis, a new technique, to interpret student-constructed concept maps, which reveals fresh insights into the graphic features of the concept map and into how students connect mathematical concepts. By comparing two traditional school tests with the concept map, she examines its concurrent validity and discusses its strengths and drawbacks from the viewpoint of assessing conceptual understanding. With self-designed questionnaires, interviews, and open-ended writing tasks, she also investigates students and teachers' attitudes toward concept mapping and describes the implications these findings may have for concept mapping's use in school and for further research on the topic. Scholars and postgraduate students of mathematics education and teachers interested in concept mapping or assessing conceptual understanding in classroom settings will find this book an informative, inspiring, and overall valuable addition to

their libraries.
