As of June 2015, Android had 82.8% of the global smartphone market share, compared to 13.9% for Apple and 2.6% for Microsoft (<http://www.idc.com/prodserv/smartphone-os-market-share.jsp>). Billions of apps have been downloaded from Google Play and more than one billion Android devices were shipped worldwide in 2014 (<http://www.cnet.com/news/android-shipments-exceed-1-billion-for-first-time-in-2014/>). The opportunities for Android app developers are enormous. This book presents leading-edge computing technologies

for professional software developers. At the heart of the book is the Deitel app-driven approach—concepts are presented in the context of complete working Android apps, rather than using code snippets. The introduction and app test drives at the beginning of each chapter show one or more sample executions. The book’s source code is available at <http://www.deitel.com/books/AndroidFP3>. The apps in this book were carefully designed to introduce you to key Android features and APIs. You’ll quickly learn everything you need to start building Android apps—beginning with a test-drive of the Tip Calculator app in Chapter 1, then building one new app in each of Chapters 2 through 9. By the time you reach Chapter 10, you’ll be ready to create your own apps for submission to Google Play and other app marketplaces. You’ll master the Google Play submission process, including uploading your apps. You’ll decide whether to sell your apps or offer them for free, and

Google Assistant Mark Dascano 2018-08-13 Google Assistant is a virtual assistant that was designed by Google particularly for smart home and mobile devices. It is similar to Alexa, Siri and Cortana that are popular on other devices, as it can also engage in two-way dialog. It was initially released in May 2016 on the Pixel and Pixel XL mobile phones but was later introduced to other smartphones in February of the following year. Users are able to engage Google Assistant with their own voice or by using keyboard input. Google Assistant browses the web, sets alarms and modifies the hardware settings on the smart device. Developers of Google Assistant have announced that the software will also collect visual information and pinpoint objects using the device's camera as well as support the sending of money and the

purchase of products.
