Asia-Pacific Economic Cooperation (APEC)

Werner Draguhn 2013-04-03 The Asia-Pacific
Economic Cooperation (APEC) was founded in
1989. Since then the forum has developed into a
major player in tri-partite relations between
North America, East Asia and Europe. The
Seattle and Bogor Summits were landmark
events suggesting to many observers a
gravitational shift in the world economy and

world politics. Yet the Asian financial crisis had
a sobering effect on high-flying expectations as
APEC contributed little to crisis management. In
the light of such contradictory performance,
distinguished scholars here examine APEC's
achievements and failures, its role and functions
in international relations, its linkages with
regional organisations and the interplay between
the forum and national interests of major factors
in the region.

Early Warning Systems and Targeted Interventions for Student Success in Online

Courses Glick, Danny 2020-06-26 Online
learning has increasingly been viewed as a
possible way to remove barriers associated with
traditional face-to-face teaching, such as
overcrowded classrooms and shortage of
certified teachers. While online learning has

been recognized as a possible approach to deliver more desirable learning outcomes, close to half of online students drop out as a result of student-related, course-related, and out-of-school-related factors (e.g., poor self-regulation; ineffective teacher-student, student-student, and platform-student interactions; low household income). Many educators have expressed concern over students who unexpectedly begin to struggle and appear to fall off track without apparent reason. A well-implemented early warning system, therefore, can help educators identify students at risk of dropping out and assign and monitor interventions to keep them on track for graduation. Despite the popularity of early warning systems, research on their design and implementation is sparse. *Early Warning Systems and Targeted Interventions for Student Success in Online Courses* is a cutting-edge research publication that examines current theoretical frameworks, research projects, and empirical studies related to the design,

implementation, and evaluation of early warning systems and targeted interventions and discusses their implications for policy and practice. Moreover, this book will review common challenges of early warning systems and dashboard design and will explore design principles and data visualization tools to make data more understandable and, therefore, more actionable. Highlighting a range of topics such as curriculum design, game-based learning, and learning support, it is ideal for academicians, policymakers, administrators, researchers, education professionals, instructional designers, data analysts, and students.
