Data Talks Daria Williamson, Ed.D. 2026-01-10 Collaborative learning teams (CLTs) produce positive outcomes for students by capitalizing on the knowledge and skills of individual team members. This Data Talks: The Counselors' Guide to Increasing Graduation Rates eBook adapts the CLT process made famous by Richard DuFour so that it can be used by school counselors to improve graduation rates. The book is divided into three main parts. The first four chapters introduce counselors to collaborative learning teams: purpose, critical questions, data sources, and operating guidelines. The remaining chapters provide a "how to" guide for creating and conducting the meetings that make up the plan-do-check-act cycle of the CLT process. Finally, the appendices provide step-by-step directions that counseling CLTs can use to organize the data sets referenced throughout the book. With detailed explanations and real-world examples, Data Talks equips counselors with the guidance and tools to answer the four critical CLT questions related to on-time graduation. 1. What do we want students to achieve? 2. How do we know when they've achieved it? 3. What do we do when they follow their graduation plan? 4. What do we do when they don't follow their graduation plan?

Digital Apollo David A. Mindell 2011-09-30 The incredible story of how human pilots and automated systems worked together to achieve the ultimate achievement in flight—the lunar landings of NASA's Apollo program As Apollo 11's Lunar Module descended toward the moon under automatic control, a program alarm in the guidance computer's software nearly caused a mission abort. Neil Armstrong responded by switching off the automatic mode and taking direct control. He stopped monitoring the computer and began flying the spacecraft, relying on skill to land it and earning praise for a triumph of human over machine. In *Digital Apollo*, engineer-historian David Mindell takes this famous moment as a starting point for an exploration of the relationship between humans and computers in the Apollo program. In each of the six Apollo landings, the astronaut in command seized control from the computer and landed with his hand on the stick. Mindell recounts the story of astronauts' desire to control their spacecraft in parallel with the history of the Apollo Guidance Computer. From the early days of aviation through the birth of spaceflight, test pilots and astronauts sought to be more than "spam in a can" despite the automatic controls, digital computers, and software developed by engineers. *Digital Apollo* examines the design and execution of each of the six Apollo moon landings, drawing on transcripts and data telemetry from the flights, astronaut interviews, and NASA's extensive archives. Mindell's exploration of how human pilots and automated systems worked together to achieve the ultimate in flight—a lunar landing—traces and reframes the debate over the future of humans and automation in space. The results have implications for any venture in which human roles seem threatened by automated systems, whether it is the work at our desktops or the future of exploration.
