Fostering Children's Mathematical Power Arthur Baroody 1998-09-01 Teachers have the responsibility of helping all of their students construct the disposition and knowledge needed to live successfully in a complex and rapidly changing world. To meet the challenges of the 21st century, students will especially need mathematical power: a positive disposition toward mathematics (curiosity and self confidence), facility with the processes of mathematical inquiry (problem solving, reasoning and communicating), and well connected mathematical knowledge (an understanding of mathematical concepts, procedures and formulas). This guide seeks to help teachers achieve the capability to foster children's mathematical power - the ability to excite them about mathematics, help them see that it makes sense, and enable them to harness its might for solving everyday and extraordinary problems. The investigative approach attempts to foster mathematical power by making mathematics instruction process-based, understandable or relevant to the everyday life of students. Past efforts to reform mathematics instruction have focused on only one or two of these aims, whereas the investigative approach accomplishes all three. By teaching content in a purposeful context, an inquiry-based fashion, and a meaningful manner, this approach promotes children's mathematical learning in an interesting, thought-provoking and comprehensible way. This teaching guide is designed to help teachers appreciate the need for the investigative approach and to provide practical advice on how to make this approach happen in the classroom. It not only dispenses information, but also serves as a catalyst for exploring, conjecturing about, discussing and contemplating the teaching and learning of mathematics.

Connecting Mathematics and Science to Workplace Contexts Edward Britton 1999-06-23 Engage students through real-world curriculum It's no accident that employers complain that newly minted graduates are out of touch with the realities of work demands! Too often, there is a disconnect between what is taught in the classroom and what is demanded in the workplace, and students suffer the consequences. Mathematics and science curricula can play a critical role in solving this dilemma. In this comprehensive review of 23 exemplary curricula/programs, the authors offer an easy-to-use guide for tying curriculum to workplace experiences--from a hematology laboratory to an agricultural setting to a soda bottling company--these programs illustrate concrete real-life situations to which students can relate and derive motivation. Learn how to: Meet the goals of science, mathematics, and technology education Meet national curriculum standards Chart key characteristics of successful curricula Connect curriculum to workplace contexts Create your own curriculum materials This book is a must for mathematics and science educators, curriculum developers and supervisors, and educators in school-to-work programs and vocational courses.

Helping Children Learn Mathematics Robert Reys 2014-11-03 The 11th Edition of Helping Children Learn Mathematics is designed to help those who are or will be teachers of mathematics in elementary schools help children develop understanding and proficiency with mathematics so they can solve problems. This text is built around three main themes; helping children make sense of mathematics, incorporating practical experiences and using research to guide teaching. It also integrates connections and implications from the Common Core Standards: Mathematics (CCSS-M).

The New Walford Guide to Reference Resources Ray Lester 2005 The New Walford highlights the best resources to use when undertaking a search for accurate and relevant information, saving you precious time and effort. For those looking for a selective and evaluative reference resource that really delivers on its promise, look no further. In addition to print sources, The New Walford naturally covers an extensive range of e-reference sources such as digital databanks, digital reference services, electronic journal collections, meta-search engines, networked information services, open archives, resource discovery services and websites of premier organizations in both the public and private sectors. But rather than supplying a list of all available known resources as a web search engine might, The New Walford subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful. With an emphasis on quality and sustainability, the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas. As a result the resource evaluations in each subject area are prefaced by an introductory overview of the structure of the relevant literature. This ensures that The New Walford is clear, easy-to-use and intuitive. - Publisher.
