CPP Exam Essential Topics Study Guide 2013

ExamREVIEW 2012-09-23 In the practical real world a CPP may be a security manager, an external consultant, or a law enforcement agent. For purpose of the exam, however, you want to position yourself as a hired consultant - one who acts as an advisor to the company management. The company is your client, and you are helping it out. You advise, you guide, and you recommend. You need to understand your client. If your client is absolutely new to security, full scale interviews and statistical analysis on crimes may be necessary. However, if your client has a working security mechanism in place, then you should conduct

assessment basing primarily on inputs from management. In other words, management determines the depth and scope of the security project. Management makes the decisions. You suggest ways to improve, then carry out the decisions made by management. You don't normally make decisions for your client. It is safe to say that you assume the role of project manager for your client's security project. The security project would start by discussing the scope of work with your client. The most important meeting between you and the client would be the initial goal setting and policy review meeting. Senior management is going to get involved, and you are going to act as the facilitator. From this meeting you become aware of the level of risk your client is willing to assume and accept. Your work would then start from there. When working on a

project it is important to understand the background and operation of the client. You also want to know what you are up against. Protection against vandalism is totally different from protection against terrorist attack. A CPP is more on the planning and management side of security. A security guard professional, on the other hand, is to provide client with professional protective services. It is believed that the CPP certification is more general in nature, while the PSP certification is way more specific and in-depth in physical security. To summarize, the major knowledge areas include: Security Principles and Theories Business Principles Personnel Security Physical Security Information Security Crisis Management Investigations Legal Matters We give you knowledge information relevant to the exam specification. To be able to succeed in the real exam, you'll need to apply your earned knowledge to the

question scenarios. Many of the exam questions are written to be less straight forward. They tend to be framed within the context of short scenarios. An advice: Do NOT rely on a single source for exam preparation. To secure exam success, always use multiple sources and read as much as possible!

CPP Exam Essential Topics

ExamREVIEW 2011-01-03 To take the CPP exam one must have earned a bachelor's degree or higher from an accredited institution of higher education, plus 7 years of security experience, including

at least 3 years in responsible charge of a security function. For those without a degree, 9 years of security experience would be required. The CPP exam requires that you complete 200 multiple-choice questions covering tasks, knowledge, and skills on 8 topics. Information Security is an emerging topic. As of the time of this writing it is worth 5.5% of your total score, which is no big deal if you score really well in the other subject areas. If, however, your performance is pretty marginal on average then this 5.5% could make a brutal difference. We understand that many protection professionals are strangers to the dynamic world of Information Security. Therefore we created this special guide with an attempt to help people out - to help them do well on the CPP exam. In fact, our guide is the only product on the market that fills the gap between traditional security knowledge and the various emerging issues on information security. This is the 2011 version study guide.
