Modeling with SolidWorks is written to assist the intermediate SolidWorks user who desires to enhance their skill sets in assembly modeling. The book provides a solid foundation in assembly modeling using competency-based projects. In step-by-step instructions, you perform the following tasks: Explore top-level assemblies that contain hundreds of features, parts, and sub-assemblies. Design, create, and modify assemblies, parts, and drawings based on geometric and functional requirements. Develop assemblies from a Bottom-up design modeling approach utilizing components from global suppliers. Develop a Top-down design modeling approach incorporating a Layout sketch and in-context features. Incorporate Configurations, Design tables, Bill of Materials, and Custom properties to represent multiple design options in the part, assembly and drawing. Understand external references and features developed In-Context of an

assembly; edit and redefine references, features, and components. Exercise Shortcut keys, Customize toolbars, and Pop-up menus to build modeling speed. Maximize geometric relationships in the part sketch, build symmetry in the part, and reuse components in the assembly. Manage files through SolidWorks Explorer. Each project begins with the desired outcomes and usage competencies. You know the templates, components, drawing and tables you need to create. You review a complete list of SolidWorks tools and commands up front.

Advances in Automotive Production Technology - Theory and Application Philipp Weißgraeber 2021-06-01 This volume of the series ARENA2036 compiles the outcomes of the first Stuttgart Conference on Automotive Production (SCAP2020). It contains peer-reviewed contributions from a

theoretical as well as practical vantage point and is topically structured according to the following four sections: It discusses (I) Novel Approaches for Efficient Production and Assembly Planning, (II) Smart Production Systems and Data Services, (III) Advances in Manufacturing Processes and Materials, and (IV) New Concepts for Autonomous, Collaborative Intralogistics. Given the restrictive circumstances of 2020, the conference was held as a fully digital event divided into two parts. It opened with a pre-week, allowing everyone to peruse the scientific contributions at their own pace, followed by a two-day live event that enabled experts from the sciences and the industry to engage in various discussions. The conference has proven itself as an insightful forum that allowed for an expertly exchange regarding the pivotal Advances in Automotive Production and Technology.
