Rough Sets, Fuzzy Sets, Data Mining, and Granular

Computing Dominik Slezak

2005-09-19 This volume

contains the papers selected

for presentation at the 10th

International Conference on

Rough Sets, Fuzzy Sets, Data

Mining, and Granular

Computing, RSFDGrC 2005,

organized at the University of

Regina, August

31st-September 3rd, 2005.

This conference followed in the

footsteps of international events

devoted to the subject of rough

sets, held so far in Canada,

China, Japan, Poland, Sweden,

and the USA. RSFDGrC

achieved the status of biennial

international conference,

starting from 2003 in

Chongqing, China. The theory

of rough sets, proposed by

Zdzisław Pawlak in 1982, is a

model of approximate

reasoning. The main idea is

based on indiscernibility

relations that describe

indistinguishability of objects.

Concepts are represented by -

proximations. In applications,

rough set methodology focuses

on approximate representation

of knowledge derivable from

data. It leads to significant

results in many areas such as

finance, industry, multimedia,

and medicine. The RSFDGrC

conferences put an emphasis

on connections between rough

sets and fuzzy sets,

granular computing, and

knowledge discovery and data

mining, both at the level of

theoretical foundations and

real-life applications. In the

case of this event, additional

effort was made to establish a

linkage towards a broader

range of applications. We

achieved it by including in the

conference program the

workshops on bioinformatics,

security engineering, and

embedded systems, as well as

tutorials and sessions related

2 01 Characteristics Of Economic Systems Chart

to other application areas.
