**Handbook on Hybrid Organisations** David Billis 2020-02-28 Hybrid Organisations - that integrate competing organisational principles - have become a preferred means of tackling the complexity of today's societal problems. One familiar set of examples are organisations that combine significant features from market, public and third sector organisations. Many different groundbreaking approaches to hybridity are contained in this Handbook, which brings together a collection of empirical studies from an international body of scholars. The chapters analyse and theorise the position of hybrid organisations and have important implications for theory, practice and policy in a context of proliferating hybrid forms of organisation.

*Extending the Ground of Public Confidence* Janie Hubbard 2019-09-09 This book provides a resource for teaching civil liberties in K-12 social studies and teacher education. It covers issues like freedom of speech, privacy and voting rights, with historic and modern perspectives. Each chapter includes inquiry-based learning activities to help students develop critical skills and uphold civil liberties.

**How We Teach Science** John L. Rudolph 2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we teach science matters, especially now that its legitimacy is under attack. Why teach science? The answer to that question will determine how it is taught. Yet despite the enduring belief in this country that science should be taught, there has been no enduring consensus about how or why. This is especially true when it comes to teaching scientific process. Nearly all of the basic knowledge we have about the world is rock solid. The science we teach in high schools in particular—laws of motion, the structure of the atom, cell division, DNA replication, the universal speed limit of light—is accepted as the way nature works. Everyone also agrees that students and the public more generally should

understand the methods used to gain this knowledge. But what exactly is the scientific method? Ever since the late 1800s, scientists and science educators have grappled with that question. Through the years, they've advanced an assortment of strategies, ranging from "the laboratory method" to the "five-step method" to "science as inquiry" to no method at all. *How We Teach Science* reveals that each strategy was influenced by the intellectual, cultural, and political circumstances of the time. In some eras, learning about experimentation and scientific inquiry was seen to contribute to an individual's intellectual and moral improvement, while in others it was viewed as a way to minimize public interference in institutional science. John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation, and ultimately determine how science is perceived and received by the public.

**A.S.M. Review of Metal Literature** American Society for Metals 1967  
**From Head Shops to Whole Foods** Joshua C. Davis 2017-08-08 In the 1960s and '70s, a diverse range of storefronts—including head shops, African American bookstores, feminist businesses, and organic grocers—brought the work of the New Left, Black Power, feminism, environmentalism, and other movements into the marketplace. Through shared ownership, limited growth, and democratic workplaces, these activist entrepreneurs offered alternatives to conventional profit-driven corporate business models. By the middle of the 1970s, thousands of these enterprises operated across the United States—but only a handful survive today. Some, such as Whole Foods Market, have abandoned their quest for collective political change in favor of maximizing profits. Vividly portraying the struggles, successes, and sacrifices of these unlikely entrepreneurs, *From Head Shops to Whole Foods* writes a new history of social movements and capitalism by showing how activists embraced

small businesses in a way few historians have considered. The book challenges the widespread but mistaken idea that activism and political dissent are inherently antithetical to participation in the marketplace. Joshua Clark Davis uncovers the historical roots of contemporary interest in ethical consumption, social enterprise, buying local, and mission-driven business, while also showing how today's companies have adopted the language—but not often the mission—of liberation and social change. Computers and Society Ronald M. Baecker 2019 Computers and Society explores the history and impact of modern technology on everyday human life, considering its benefits, drawbacks, and repercussions. Particular attention is paid to new developments in artificial intelligence and machine learning, and the issues that have arisen from our complex relationship with AI.
