Plant Biostimulation with Nanomaterials Antonio Juárez-Maldonado 2025-05-31 This book covers the topic of biostimulation of crops using nanomaterials to increase crop production and quality improvement, accompanied by the reduction of environmental impact in the form of less use of pesticides and greater efficiency in the use of fertilizers and water. Different classes of biostimulants have been recognized and studied, but nanomaterials are among the most recently considered with a dual category of biostimulation-inducing physical and chemical agents. The physical process of biostimulation occurs through interactions at the interfaces of the nanomaterial corona and cell walls and membranes. In contrast, the chemical process depends on the corona and core composition. The chapters in this book present the different topics of biostimulation with nanomaterials with the consideration of different spheres of organization, from the molecular view to agricultural ecosystems. It looks at the interactions between nanomaterials and plant cells that differ depending on the corona's size, shape, specific surface, and composition, in addition to the dynamic biological contexts of development and interaction with other environmental factors. The book caters to researchers and scientists who are interested in the biostimulation of crops using nanomaterials and their long-term ecological impact.

Aging Victor R Preedy 2020-05-24 Aging: Oxidative Stress and Dietary Antioxidants, Second Edition, bridges the trans-disciplinary divide and covers the science of oxidative stress in aging and the therapeutic use of natural antioxidants in the food matrix in a single volume. The second edition covers new trials and investigations used to determine the comprehensive properties of antioxidants, food items and extracts, as

well as any adverse properties they may have. It has been updated to include new clinical human trials and a new section dedicated to animal models of aging. Throughout the book the processes within the science of oxidative stress are described in concert with other processes, such as apoptosis, cell signaling, and receptor mediated responses. This approach recognizes that diseases are often multifactorial, and oxidative stress is a single component of this. Gerontologists, geriatricians, nutritionists, and dietitians are separated by divergent skills and professional disciplines that need to be bridged to advance preventative as well as treatment strategies. While gerontologists and geriatricians may study the underlying processes of aging, they are less likely to be conversant in the science of nutrition and dietetics. On the other hand, nutritionists and dietitians are less conversant with the detailed clinical background and science of gerontology. This book addresses this gap and brings each of these disciplines to bear on the processes inherent in the oxidative stress of aging. This will aid in better research, treatment and outcome for patients. - Compares information related to mitochondrial oxidative stress in one disease to diet-related strategies in other unrelated diseases - Provides an understanding of cell signalling leading to new suggestions of preventative or therapeutic strategies - Includes a new section dedicated to animal models of aging

Includes two brand new chapters on Nerves and Muscles and the Endocrine System. Discusses both comparative systems physiology and environmental physiology. Analyses and integrates problems and adaptations for each kind of environment: marine, seashore and estuary, freshwater, terrestrial and parasitic. Examines mechanisms and responses beyond physiology. Applies an evolutionary perspective to the analysis of environmental adaptation. Provides modern molecular biology insights into the mechanistic basis of adaptation, and takes the level of analysis beyond the cell to the membrane, enzyme and gene. Incorporates more varied material from a wide range of animal types, with less of a focus purely on terrestrial reptiles, birds and mammals and rather more about the spectacularly successful strategies of invertebrates.
