Concepts in Biochemistry

Rodney F. Boyer 1998 Rodney Boyer's text gives students a modern view of biochemistry. He utilizes a contemporary approach organized around the theme of nucleic acids as central molecules of biochemistry, with other biomolecules and biological processes treated as direct or indirect products of the nucleic acids. The topical coverage usually provided in current biochemistry courses is all present - only the sense of focus and balance of coverage

has been modified. The result is a text of exceptional relevance for students in allied-health fields, agricultural studies, and related disciplines. *Journal of the House of the State of Vermont Vermont. General Assembly. House of Representatives 1997 Includes special and extra sessions.*

Gene Expression Fumiaki Uchiumi 2022-10-05 Gene expression is dependent on multiple steps, including transcription, RNA processing, and translation. Importantly, recent studies revealed that gene expression is regulated by chromatin structures and non-coding RNA profiles.

Elucidating the molecular mechanisms may contribute to the development of novel therapeutics for aging-related diseases, including cancer and neurodegenerative diseases.

This book provides a comprehensive overview of gene expression and its role in human disease. It consists of nine chapters organized into two sections on molecular mechanisms in controlling gene expression and the relationships between transcriptional control and human disease.
