Biotechnology Susan R. Barnum 1998

Biotechnology encompasses the processes and methods used to manipulate living organisms or

the substances and products from these organisms for medical, agricultural, and industrial purposes. Barnum not only supplies the big picture of the biotechnology field, but provides in-depth details to illustrate the technology. Traditionally, biotechnology texts have been too narrow in coverage and focused only on the methods used in biotechnology. In contrast, Barnums text extensively covers the topics, with lots of examples and case studies, and discusses the implications in areas such as gene therapy, medicine, agriculture, marine biology, and forensics. Designed to grab the interest of students and make the topics relevant to them, Barnums text is an excellent integration of historical and modern biotechnology topics.

The Biotech Investor's Bible George Wolff 2001-06-13 A one-stop source for investing in biotech-with detailed coverage of the science, the business, the players, and the strategies for one of today's most promising (and volatile) industries To invest in biotech is to invest in the future, and as such, investors need to learn the nuances of the science they're putting their money on. The core asset of biotech companies is knowledge, and sound investment decisions are impossible without an understanding of this complex science. That's where The Biotech Investor's Bible fits in. This much-needed, one-of-a-kind resource simplifies the complex science surrounding the business of biotech and clarifies subtle distinctions within the context of their financial repercussions. The book explains the basics of genetics, patents, and therapies; and teaches investors how to value biotech companies and their state-of-the art products and technology. The Biotech Investor's Bible offers an informative summary of the relatively short history of the industry and provides a comprehensive review of various industry sectors.

Plant Biotechnology Transfer to Developing Countries Kazuo N. Watanabe 1995 Plant biotechnology has become a priority area for technology transfer in developing countries where production of food, feed, and fiber is of vital concern. Many programs now have sufficient experience to permit an in-depth examination of approaches, achievements,

controversies, and anticipated benefits.

Developing countries are showcased for leading-edge advances, as represented by contributions from South Africa, Kenya, Indonesia, Malaysia, Thailand, China, Mexico, Brazil, and Peru with a foreword from World Food Prize Laureate, M.S. Swaminathan. These presentations are augmented by reviews from organizations facilitating plant biotechnology transfer, including philanthropic foundations, bilateral and multilateral organizations, and other new initiatives. Introductory chapters address the subjects of sustainable development, regulatory concerns, accessibility of resources, environmental issues, and socio-economic research.
