AI Nation Rising Michael T. Murphy 2026-02-26

The definitive technical and strategic reference for AI deployment in defense, governance, and critical industrial systems. At 1,700 pages and over a million words, it equips defense contractors, policymakers, law enforcement, and cybersecurity professionals with the systems knowledge and strategic frameworks to deploy AI where the consequences of failure are highest. We are living through the most consequential technological transition in modern history. Artificial intelligence is no longer confined to research laboratories — it is actively reshaping national defense doctrine, democratic governance, law enforcement, and industrial civilization. Nations that deploy AI with strategic clarity will define the global order. Those that do not will navigate a world shaped by decisions they had no part in making. AI Nation Rising is the definitive technical and strategic reference for the practitioners, planners, and policymakers who bear responsibility for getting this right. At 1,700 pages spanning thirty-one chapters, it is the most comprehensive treatment of mission-critical AI deployment ever assembled in a single work — written for defense contractors, intelligence analysts, government policymakers, law enforcement investigators, cybersecurity professionals, and industrial leaders operating at the intersection of technology and consequence. The book opens with rigorous grounding in foundational AI systems — supervised, unsupervised, and reinforcement learning paradigms; transformer-based large language models; distributed data infrastructure; and privacy-preserving techniques including federated learning and differential privacy. For a defense contractor assessing platform capabilities, a policymaker evaluating vendor claims, or a systems integrator designing classified infrastructure, this foundation is not academic. It is operational. Part III — the heart of the book — provides exhaustive coverage of

AI in defense, national security, forensic science, and law enforcement. Defense professionals will find authoritative treatment of strategic AI infrastructure, cyber defense and information warfare, counter-disinformation systems, and critical infrastructure protection. Military intelligence chapters address the full ISR pipeline, from satellite imagery automation and SIGINT processing to biometric identification and HUMINT support. Tactical applications cover autonomous combat systems, automatic target recognition, swarm coordination, and battlefield logistics. The naval chapters address Aegis combat system integration, submarine detection, anti-ship missile defense, and autonomous surface and underwater vehicles. Law enforcement professionals will find deep coverage of digital forensics, cryptocurrency crime investigation, crime scene reconstruction, trace evidence analysis, and judicial AI — including deepfake detection and evidence authentication. Parts IV and V extend this rigor across democratic governance, biomedical AI, earth sciences, space exploration, manufacturing, and financial services — from election integrity monitoring and political risk modeling, to drug discovery, pandemic response, precision agriculture, geospatial intelligence, and regulatory compliance. Throughout, the book treats deployment challenges, integration constraints, and failure modes as central subjects, not footnotes. Each domain includes analysis of near-term evolution trajectories, reflecting the reality that today's architectural decisions will shape AI capability for a decade. The closing section addresses ethics, global regulatory frameworks, and societal implications with the same analytical seriousness brought to every technical chapter. AI Nation Rising is written in full recognition of the stakes. The decisions being made today about AI in defense, governance, and critical infrastructure will shape the security and sovereignty of nations for generations — and they deserve to be informed by the best available understanding of what these technologies can do, and what it genuinely takes to deploy them where failure is measured

not in wasted resources, but in lives, freedoms, and the integrity of civilized society.

Voeller 2010-04-12 The Wiley Handbook of Science and Technology for Homeland Security is an essential and timely collection of resources designed to support the effective communication of homeland security research across all disciplines and institutional boundaries. Truly a unique work this 4 volume set focuses on the science behind safety, security, and recovery from both man-made and natural disasters has a broad scope and international focus. The Handbook: Educates researchers in the critical needs of the homeland security and intelligence communities and the potential contributions of their own disciplines Emphasizes the role of fundamental science in creating novel technological solutions Details the international dimensions of homeland security and counterterrorism research Provides guidance on technology diffusion from the laboratory to the field Supports cross-disciplinary dialogue in this field between operational, R&D and consumer communities

Electronic Attack Platform Placement

Optimization Center for Center for Joint Services

Electronic Warfare 2014-12-23 An increasingly dynamic battlefield requires increasingly faster software development. Cyber threats and Information Assurance certifications induce significant delays in software operational deployment designed to meet these emerging battlefield requirements. An alternative software development methodology for Department of Defense (DOD) acquisitions was proposed. The proposed software development methodology uses tailoring of commercial pre-approved applications such as Microsoft Office and Adobe currently available on most DOD networks. The application developed to test the validity of this approach is called the electronic attack platform placement optimization (EAPPO) algorithm. Given digital terrain data, a user inputted strike route, and an enemy order-of-battle (EOB) with their respective jammer techniques as inputs, the application output includes terrain and radar impacted threat range rings, aircraft strike routes, and an optimized flight path for the jamming platform (EA-18G). Successful development of the application validates the potential of using pre-approved, non-compiled software to develop military specific applications, a process that could significantly decrease software development time and cost for the DOD.

Proceedings Of The International Conference On

Icmee 2009 Venkatesh Mahadevan 2009-07-16

The 2009 International Conference on Mechanical and Electronics Engineering (ICMEE 2009) will be held in Chennai, India from 24-26 July, 2009. The aim of ICMEE 2009 is to provide a platform for researchers, engineers, academicians as well as industrial professionals from all over the world to present their research findings and development activities in mechanical and electronics engineering. This conference provides opportunities for the delegates to exchange new ideas and application experiences face to face, to forge new business or research relations and to find global partners for future collaboration.
