Oracle Enterprise Manager - an all-encompassing management product - facilitates increased management capabilities for databases, application servers, and packaged applications. BPEL PM and OSB are two compelling, market leading products that are driving Service-Oriented Architecture (SOA) implementation across enterprises. There is a lack of clarity around real-world operational use cases that would help operational administrators in their day-to-day tasks. Further, the documentation available online does not provide much information on administering BPEL PM and OSB with Enterprise Manager Grid Control efficiently. This book will help you set up the framework for managing operational tasks from a central location using Oracle Enterprise Manager Grid Control in a step-by-step functional approach. You will learn to automate various operational tasks that are essential for the smooth running of Oracle SOA products in production, thus increasing the efficiency of your SOA projects. This book shows how top-drawer management capabilities from Oracle Enterprise Manager Grid Control can be used to effectively manage your Oracle SOA environment. You start by discovering one or more BPEL and OSB components centrally. The book then explains how to monitor BPEL processes and OSB services, and how to get alerts on service availability and performance problems. It covers the management of BPEL and OSB infrastructure components and how to manage their configurations in a central repository. It follows a hands-on approach, showing you how to use an automated approach for deploying BPEL processes and OSB projects. By the end of this book, you will have learned several techniques to set up a framework that will help you manage your SOA environment from a central location. What you will learn Explore BPEL Process Manager and OSB targets Monitor BPEL processes, partner links, OSB proxy, and business services using a combination of server metrics and synthetic tests Monitor the BPEL instances causing errors by creating SOAP tests Manage the BPEL and OSB infrastructure by monitoring configuration changes Manage service-level expectations around SOA services Create a dashboard to monitor critical SOA services, key metrics, and SLAs Deploy BPEL and OSB artifacts in an automated fashion to ensure that the deployments are conducted in an error free manner Manage the configuration settings of the BPEL and OSB infrastructure, including setting baselines and comparisons Clone an existing SOA Suite from one instance to another to automate the creation of a new SOA Suite environment Who this book is for This book is written for BPEL and OSB administrators who deal with Oracle BPEL Process Manager, Oracle SOA Suite, or Oracle Service Bus in a production environment and who need to automate operational tasks. If you are an SOA architect or associated with SOA governance, this book will serve as an eye opener for the many available features to provide production assurance in complex SOA environments. A general awareness of Service-Oriented Architecture is expected, as well as an awareness of Oracle SOA products such as BPEL Process Manager and Oracle Service Bus. *Business Process Management Cases Vol. 2* Jan vom Brocke 2021-08-04 This book is a sequel and extension to the book "Business Process Management Cases", published in its first edition by Springer in 2018. It adds 22 new cases for practitioners and educators to showcase and study Business Process Management (BPM). The BPM cases collection is dedicated to providing a contemporary and comprehensive, industry-agnostic insight into the realities of BPM. In particular it focuses on the lessons that only authentic cases can provide. The experiences documented cover both, the positive impact of deploying BPM as well as the lessons learnt from failed attempts. Each case takes a holistic approach and by doing so, each chapter recognizes that BPM in practice is a multidimensional endeavor covering strategy to operations, systems and infrastructure, governance and culture, models and running processes. This volume also introduces a new device to plan and scope BPM initiatives: the BPM Billboard. The Billboard helps professionals to link BPM projects to the corporate strategy and to build the organizational capabilities to reach such strategic directive. Digital technologies do not just facilitate innovative process designs, but enable entire new strategic options. This book provides a contemporary and comprehensive overview of how to create process-enabled strategies in an opportunity-rich environment. Martin Petry, Hilti CIO This is the first book to present the BPM Billboard - A new management tool to plan and scope BPM initiatives. The Billboard together with the insightful real-world cases offers valuable guidance towards BPM success from a holistic perspective. Gero Decker, Signavio CEO

It enables users to schedule jobs running inside the database such as PL/SQL procedures or PL/SQL blocks, as well as jobs running outside the database like shell scripts. Scheduler ensures that jobs are run on time, automates business processes, and optimizes the use of available resources. You just need to specify a fixed date and time and Scheduler will do the rest. What if you don't know the precise time to execute your job? Nothing to worry about, you can specify an event upon which you want your job to be done and Scheduler will execute your job at the appropriate time. Although scheduling sounds quite easy, it requires programming skills and knowledge to set up such a powerful, intelligent scheduler for your project. This book is your practical guide to DBMS\_SCHEDULER for setting up platform-independent schedules that automate the execution of time-based or event-based job processes. It will show you how to automate business processes, and help you manage and monitor those jobs efficiently and effectively. It explains how Scheduler can be used to achieve the tasks you need to make happen in the real world. With a little understanding of how the Scheduler can be used and what kind of control it gives, you will be able to recognize the real power that many known enterprise-class schedulers ñ with serious price tags ñ cannot compete with. You will see how running a specific program can be made dependent on the successful running of certain other programs, and how to separate various tasks using the built-in security mechanisms. You will learn to manage resources to balance the load on your system, and gain increased database performance. What you will learn Create simple as well as complex jobs and schedule their execution according to your specific needs Manage jobs independently of any particular platform so that they can be moved from one system to another easily Create chains to link related programs, based on contingent outcomes Flag the Scheduler to raise events when unexpected events occur Manage logs to find out when jobs ran and analyze the runtime behavior based on recorded execution times Combine your resource manager and Scheduler to get maximum throughput for managing thousands of jobs at a time Run jobs on machines that do not have a running database using the remote job agent Learn to debug jobs and make sure jobs run as expected Who this book is for This book is intended for Administrators and Developers who currently use tools like cron, DBMS\_JOB, and the task manager, but who now want more control or who have a need to scale up to tools that can handle the network. Complex tasks can be built that easily control business process and enable the completion of important tasks in limited time. The reader is expected to have some experience of Oracle Database Management, and a working knowledge of SQL and PL/SQL.

**WS-BPEL 2.0 for SOA Composite Applications with Oracle SOA Suite 11g** Matjaz B Juric 2010-09-06 Define, model, implement, and monitor real-world BPEL business processes with SOA powered BPM. Key Features Develop BPEL and SOA composite solutions with Oracle SOA Suite 11g Efficiently automate business processes with WS-BPEL 2.0 and develop SOA composite applications. Get familiar with basic and advanced BPEL 2.0. Detailed explanation of advanced topics, such as security, transactions, human workflow, process monitoring, transition from BPMN to BPEL, dynamic processes, fault handling, etc., enabling you to work smarter and more efficiently. Step-by-step real-world examples to learn and manage various advanced aspects of BPEL development using Oracle SOA Suite 11g, JDeveloper, Oracle Service Bus, Oracle Service Registry, Oracle Enterprise Repository, BPM Suite and BPA Suite Book Description Business Process Execution Language (BPEL, aka WS-BPEL) has become the de-facto standard for orchestrating services in SOA composite applications. BPEL reduces the gap between business requirements and applications and allows for better alignment between business processes and underlying IT architecture. BPEL is for SOA what SQL is for databases. Therefore learning BPEL is essential for the successful adoption of SOA or the development of composite applications. Although BPEL looks simple at first sight, it hides its large potential and has many interesting and advanced features. If you can get familiar with these features - you can maximize the value of SOA. This book provides a comprehensive and detailed coverage of BPEL, one of the centerpieces of SOA. It covers basic and advanced features of BPEL 2.0 and provides several real-world examples. In addition to BPEL specification the book provides comprehensive coverage of BPEL support in Oracle SOA Suite 11g, including security, transactions, human workflow, process monitoring, automatic generation of BPEL from process models, dynamic processes, and more. This book starts with an introduction to BPEL, its role with regard to SOA and the process-oriented approach to SOA. The authors give short descriptions of the most important SOA platforms and BPEL servers—the run time environments for the execution of business processes specified in BPEL—and compare BPEL to other business process languages. The book will then move on to explain core concepts such as invoking services, synchronous and asynchronous processes, partner links, role of WSDL, variables, flows, and more. Moving ahead you will become familiar with fault handling, transaction management and compensation handling, scopes, events and event handlers, concurrent activities and links. The authors also discuss the business process lifecycle, correlation of messages, dynamic partner links, abstract business processes and mapping from BPMN to BPEL. The book presents in detail, how to use BPEL with Oracle SOA Suite 11g PS2. It explains the development of BPEL and SCA assemblies, and demonstrates different approaches with some practical examples. It addresses security, transaction handling, and human workflow. Then, the book addresses entity variables, notification services, fault management framework, and business events in BPEL. It provides exhaustive coverage of monitoring BPEL processes and developing dashboards with Oracle BAM. It explains how to use BPEL processes with Oracle Service Bus and Oracle Service Registry. Using examples, the book also demonstrates how to transform business process models in BPMN (using Business Modeler) to BPEL, how to achieve round-tripping using BPA Suite and BPM Suite, and how to use Oracle Enterprise Repository to govern BPEL processes. The book also covers the complete BPM lifecycle from modeling through implementation, execution, monitoring, and optimization and presents advanced, real-world examples. What you will learn Fully understand the role of BPEL in SOA and

the overall understanding what BPEL is, and why it is important Compose business processes in BPEL Explore BPEL 2.0 activities, loops, decisions, flow control, variables, scopes and other constructs that will enable you to develop BPEL processes. Dig into advanced BPEL topics, such as fault handlers, event handlers, compensation, concurrent activities, links, correlations, message properties, dynamic partner links, process lifecycles, and more. Examine human workflow in BPEL, including BPEL4People and WS-HumanTask. Secure BPEL processes and defining transactional boundaries. Examine the advanced features of BPEL Process Manger such as BPEL extensions, dynamic parallel flow, notification service, Java embedding, fault management framework, entity variables, master and detail processes. Utilize business events in BPEL. Monitor BPEL processes using Oracle BAM. Use BPEL with Oracle Service Bus and Oracle Service Registry. Generate BPEL from BPMN and round-trip the changes with BPA Suite and BPM Suite. Govern BPEL processes with Oracle Enterprise Repository. Develop and control the full BPM life cycle using Oracle SOA Suite 11g, JDeveloper, Oracle BAM, Oracle Service Bus, Oracle Service Registry, BPA and BPM Suite, and Oracle Enterprise Repository. Who this book is for This book is aimed at SOA architects and developers involved in the design, implementation, and integration of composite applications and end-to-end business processes. The book provides comprehensive coverage of WS-BPEL 2.0 for implementing business processes and developing SCA composite application, dealing with the issues of composition, orchestration, transactions, coordination, and security. This book uses Oracle SOA Suite 11g and related Oracle products. To follow this book you need to have basic knowledge of XML, web services, and Java EE. **Cases on ICT Utilization, Practice and Solutions: Tools for Managing Day-to-Day Issues** Al-Mutairi, Mubarak S. 2010-11-30 "This book presents in-depth insight through a case study approach into the current state of research in ICT as well as identified successful approaches, tools and methodologies in ICT research"--Provided by publisher.

**Oracle Enterprise Manager 12c Command-Line Interface** Kellyn Pot'Vin 2014-11-03 Oracle Enterprise Manager 12c Command-Line Interface shows how to use Enterprise Manager's powerful scripting language to automate your database administration work and save time by scripting routine tasks, and then executing those scripts across collections of databases and instances in your environment. This book is chock full of ready-made scripting examples contributed by the authors and leading members of the community. For example, you'll find scripts and examples of commands to: Remove an Enterprise Manager agent and its related targets Quickly create administrator accounts that are fully-configured with pre-expired passwords and all needed roles Invoke batch files to execute sequences of related commands with consistency against multiple targets Batch create large groups of user logins with a single command and more! The Enterprise Manager Command Line Interface (EM CLI) is the administrator's key to unlocking the power of Enterprise Manager 12c (EM12c) with scalability, repeatability, and confidence. In previous versions, most administrators ventured into the command-line interface only with the assistance of Oracle Support. But now there are many features in EM12c that are accessible only from the command-line. This is far from a disadvantage! Enterprise Manager is now a powerful tool for automation in the hands of a skilled database administrator. Enterprise Manager scripting offers potential for all administrators who manage Oracle's enterprise-level products in their environment. You can automate from the smallest, single-instance configuration all the way up to a broadly distributed enterprise-level rollout having database instances strewn across broad geographical distributions. The power of the EM CLI returns the administrator to the golden age, where the entire environment, from database to application to infrastructure, can often be managed from this powerful command line tool secured by the robust Enterprise Manager framework. Brings a golden-age of automation to Oracle Database administrators Provides ready-made scripts contributed by leading members of the community Covers advanced techniques involving Jython and Python
