Mosby's USMLE Step 1 Reviews--neuroscience Anthony J. Castro 1996 This comprehensive and reader-friendly text covers neurology in the

context of basic science. Offering a practical outline format to clarify concepts, it presents clinical relationships in chapters on normal structure and function, and devotes extensive coverage to neurology-related material in the chapters on the neurological examination and neurological disorders. Important information is emphasized through the liberal use of tables, information boxes, margin notes and numerous figures, including an MRI-based atlas. Questions at the end of each chapter and a chapter on case-based problem solving exercises provide further reinforcement and emphasis of important concepts. An extensive glossary of nearly 700 items provides convenient access to definitions and descriptions.

Financial Market Bubbles and Crashes Harold L. Vogel 2021-12-17 Economists broadly define financial asset price bubbles as episodes in which prices rise with notable rapidity and depart from historically established asset valuation multiples and relationships. Financial economists have for decades attempted to study and interpret bubbles through the prisms of rational expectations, efficient markets, equilibrium, arbitrage, and capital asset pricing models, but they have not made much if any progress toward a consistent and reliable theory that explains how and why bubbles (and crashes) evolve and are defined, measured, and compared. This book develops a new and different approach that is based on the central notion that bubbles and crashes reflect urgent short-side rationing, which means that, as such extreme conditions unfold, considerations of quantities owned or not owned begin to displace considerations of price.
