

Case Scenario For Nursing Care Plan

Implementing Nursing Diagnosis-based Practice Constance D'Argenio 1991 During the past ten years, nursing diagnosis has received increasing attention as a vital component of the nursing process and as a method for defining and delineating the purview of nursing (rather than medical) care. This book focuses on the operational aspects of implementing the use of nursing diagnosis throughout a department or on a given unit. It provides nurse managers, clinical nurse specialists, and staff development educators with a practical, reality-based guide To The effective implementation of nursing diagnosis based on actual experience.

This is a new edition of the highly successful textbook which explores the use of the Roper, Logan and Tierney Model of Nursing in practice. It underpins nursing care for patients with a variety of health care problems. The main focus is on nursing adult patients in acute and community-based settings. Applying the RLT Model in Practice has been written to enable students and their teachers in both Higher Education and clinical practice to explore the different dimensions of the model through a variety of case studies and exercises. The case studies can be viewed as 'triggers' for student problem-solving skills in using the Model. Many of the exercises are aimed at enabling readers to find evidence to support nursing activities. The authors have incorporated an international perspective throughout the text. Based on the most popular model used in general nursing care throughout the world Explicitly demonstrates how the RLT model can be used to assess, plan, deliver and evaluate individualised nursing care Applies the RLT model in the context of today's health services and links it to clinical governance and the multi-disciplinary context of care Uses a problem solving approach with extensive use of exercises and case studies Attractive two-colour design using boxes, tables and summaries Fully updated throughout in line with changes in practice, developments in the evidence base, changes in the NHS e.g. modern matrons, Modernisation Agency etc More material on how to apply the model in an inter disciplinary context Updated infection control section More on discharge planning More material relating to primary care

Essentials of Nursing Care Christopher Bassett 2003 This text draws together acknowledged experts in their respective fields and, using a very patient-focused approach, provides the reader with the concise, practical and readily usable information they need to give the patient tangible and effective care. The book uses a system-based approach to work through the entire body, and includes the vital area of psychological care. The final chapter gives the reader valuable guidelines on how to use research to find out more about evidence-based practice and make it part of the future practice of the nurse - a vital requirement for professional nursing practice.

Psychiatric Mental Health Nursing Noreen Cavan Frisch 2006 Building knowledge and fostering empathy simultaneously, no other book captures nursing care for patients with psychiatric disorders quite like Psychiatric Mental Health Nursing. The distinctive approach of this text is unrivaled, as it utilizes excerpts from literature, movie clips, and classic art to convey actual experiences of clients with psychiatric disorders. The scientific basis of disease is presented for a thorough collection of conditions and disorder types, such as anxiety, depression, mania, and schizophrenia; as well as therapeutic and pharmacological interventions for the people experiencing them. Special consideration is also provided for the suicidal client, the client who abuses chemical substances, and survivors of violence or abuse. Comprehensive in scope and unique in delivery, this title presents the reality of psychiatric nursing care.
