The Nine Chapters on the Mathematical Art Kangshen Shen 1999 The
Nine Chapters on the Mathematical Art is a classic text: the most
important mathematical source in China during the past 2000 years, and
comparable in significance to Euclid's Elements in the West. This volume
contains the first complete English translation of the Nine Chapters,
together with two commentaries written in the 3rd and 7th centuries AD,
and a further commentary by the translators. The Nine Chapters
contains 246 problems and their solutions, which fall into nine categories
that are firmly based on practical needs. There are methods for solving
problems in areas such as land measurement, construction, agriculture,
commerce, and taxation. The Chinese commentators provided the
algorithms needed to solve the problems, and explanations of how the
algorithms work. The translators' commentary provides clear and
accessible background material for the Western reader, explanations of
technicalities, and notes on the treatment of similar or identical
mathematical problems in other countries. The Nine Chapters quickly
acquired a distinguished reputation, and was the standard mathematics
textbook in China and the surrounding regions until Western science was
introduced in about 1600. This English translation gives the reader an
idea of the distinctive style and important contributions of traditional
Chinese mathematics.
