[\*] Explore the new features and components in Spring [\*] Evolve towards micro services and cloud native applications [\*] Gain powerful insights into advanced concepts of Spring and Spring Boot to develop applications more effectively [\*] Understand the basics of Kotlin and use it to develop a quick service with Spring Boot Book Description Spring 5.0 is

due to arrive with a myriad of new and exciting features that will change the way we've used the framework so far. This book will show you this evolution—from solving the problems of testable applications to building distributed applications on the cloud. The book begins with an insight into the new features in Spring 5.0 and shows you how to build an application using Spring MVC. You will realize how application architectures have evolved from monoliths to those built around microservices. You will then get a thorough understanding of how to build and extend microservices using Spring Boot. You will also understand how to build and deploy Cloud-Native microservices with Spring Cloud. The advanced features of Spring Boot will be illustrated through powerful examples. We will be introduced to a JVM language

that's quickly gaining popularity - Kotlin. Also, we will discuss how to set up a Kotlin project in Eclipse. By the end of the book, you will be equipped with the knowledge and best practices required to develop microservices with the Spring Framework. What you will learn

### *Impact of Non-destructive*

*Testing, NDT-89* C. Brook 1990 The 28th British Conference on NDT, the annual conference of The British Institute of Non-Destructive Testing, was held in Sheffield, UK, 18-21 September 1989. Its theme was the impact of NDT, and it provided a valuable opportunity for participants to learn of the current developments in the field. The formal presentations are recorded in this volume; all of the major methods of NDT are detailed, with an emphasis on ultrasonics. Other topics covered in papers include radiography, electronic imaging, crack depth measurement, concrete, and NDT in aircraft. The papers combine to present a comprehensive account of the latest literature in the field, with an excellent representation of the conference's research sessions. Overall the book serves as a valuable record of the

conference and provides an insight into recent literary contributions for non-attendees.

**ABC's of Relationship Selling** Charles Futrell

2003-07-29 The Second Canadian Edition of ABC's of Relationship Selling explores professional selling from a Canadian perspective. As the title of the book suggests, the text is centered around a philosophy about selling: that success requires mastery of selling basics, including

selecting presentation styles and effective closing techniques. In addition, other key topics such as ethics and territory management are explored. Using a logical step-by-step approach, ABC's of Relationship Selling takes students through the selling process and gives them the tools they need to build effective customer relationships. Regardless of the career path students pursue, knowledge of selling skills such as effective communication and negotiation will prepare them for the workplace.

Towards Extensible and Adaptable Methods in Computing Shampa Chakraverty 2018-11-04 This book addresses extensible and adaptable computing, a broad range of methods and techniques used to systematically tackle the future growth of systems and respond proactively and seamlessly to change. The book is divided into five main sections: Agile Software Development, Data Management, Web Intelligence, Machine Learning and Computing in Education. These sub-domains of computing work together in mutually complementary ways to build systems and applications that scale well, and which can successfully meet the demands of changing times and contexts. The topics under each track have been carefully selected to highlight certain qualitative aspects of applications and systems, such as scalability, flexibility, integration, efficiency and context awareness. The first

section (Agile Software Development) includes six contributions that address related issues, including risk management, test case prioritization and tools, open source software reliability and predicting the change proneness of software. The second section (Data Management) includes discussions on myriad issues, such as extending database caches using solid-state devices, efficient data transmission, healthcare applications and data security. In turn, the third section (Machine Learning) gathers papers that investigate ML algorithms and present their specific applications such as portfolio optimization, disruption classification and outlier detection. The fourth section (Web Intelligence) covers emerging applications such as metaphor detection, language identification and sentiment analysis, and brings to the fore web security issues such as fraud detection and trust/reputation systems. In closing, the fifth section

(Computing in Education) focuses on various aspects of computer-aided pedagogical methods.
