Research Methods in Pharmacy Practice Zubin Austin 2018-02-21 This is a comprehensive guide to applying research methods to practice problems. It uses case-based examples and activities rooted in practice to support development of knowledge, skills, and confidence in applying evidence-based research methods. An array of different methodologies and qualitative/quantitative methods are described. Examples of topics include distinction between methodologies and methods, ethics protocols, as well as design/implementation/data analysis/interpretation of findings using methods such as surveys, interviews, focus groups, observational research, database mining, text and document analysis, quality improvement (PDSA cycles), economic (cost/benefit) evaluations. - Perfect for MPharm students doing their research thesis, but relevant to all bioscience students undertaking research projects. - Use of pharmacy practice case examples (in community, hospital, ambulatory, primary care and other settings) throughout. - Examples of how to tackle a research question from different perspectives, e.g. which is the best way to answer each question and why. - Inter-professional practice and research emphasized. - Self-assessment and self-reflection questions to help readers confirm their understanding/learning. - A one-stop research-method teaching resource for faculty.

The authors emphasize the relationships between probability, probability distributions, and hypothesis testing using both parametric and nonparametric analyses. Copious examples throughout the text apply concepts and theories to real questions faced by researchers in biology, environmental science, biochemistry, and health sciences. Dozens of examples and problems are new to the Third Edition, as are "Concept Checks"—short questions that allow readers to immediately gauge their mastery of the topics presented.
