Concepts in Biochemistry

Rodney F. Boyer 1998 Rodney Boyer's text gives students a modern view of biochemistry. He utilizes a contemporary approach organized around the theme of nucleic acids as central molecules of biochemistry, with other biomolecules and biological processes treated as direct or indirect products of the nucleic acids. The topical coverage usually provided in current biochemistry courses is all present - only the sense of focus and balance of coverage has been modified. The result is a text of exceptional relevance for students in allied-health fields, agricultural

studies, and related disciplines. **Biochemistry** John L.

Tymoczko 2012-02-01 Derived from the classic text originated by Lubert Stryer and continued by John Tymoczko and Jeremy Berg, *Biochemistry: A Short Course* offers that bestseller's signature writing style and physiological emphasis, while focusing on the major topics taught in a one-semester biochemistry course. This second edition takes into account recent discoveries and advances that have changed how we think about the fundamental concepts in biochemistry and human health.

DNA Microarrays David Bowtell 2003 DNA microarray technology is a new and powerful means to analyze genomes and characterize patterns of gene expression. Its applications are widespread across the many fields of plant and animal biological and biomedical research. This manual, designed to extend and to complement the information in the best-selling *Molecular Cloning*, is a

synthesis of the expertise and experience of more than 30 contributors—all innovators in a fast-moving field. DNA Microarrays provides authoritative, detailed instruction on the design, construction, and applications of microarrays, as well as comprehensive descriptions of the software tools and strategies required for analysis of images and data.

Bidirectional Gene

Promoters Fumiaki Uchiumi
2022-11-25 Recent studies in human genetics and in silico analyses have revealed that a number of genes are head-head orientated with other genes or non-coding RNAs. The expression of regulatory element-containing 5'-upstream regions of gene pairs are referred to as bi-directional promoters and are thought to have a key role in biological regulatory mechanisms. For example, tumor suppressor protein-encoding TP53 and BRCA1 genes are head-head bound with WRAP53 and NBR2, respectively. DNA-repair factor-encoding ATM

and PRKDC (DNA-PKcs) genes have bidirectional partner NPAT and MCM4, respectively. Surveillance of the human DNA database has revealed that the numbers of DNA repair/mitochondrial function/immune response-associated genes are bound with other genes that are transcribed to opposite direction. The observations may encourage us to investigate in the molecular mechanisms how DNA repair/mitochondrial function/immune response-associated genes are regulated by bidirectional promoters. Not only protein-coding genes, but also quite a few ncRNAs, which play important roles in various cellular events, are transcribed under the regulation of the bidirectional promoters. More importantly, we know that dysregulation in the promoter activity and transcription initiation of genes might cause human diseases. - Provides an overview of the process of transcription - Explains why there so many bidirectional promoters present in human

genomes - Covers how the diverse biological functions of (non-coding RNAs) ncRNAs are controlled
