

Chapter 10 Ten Words In Context

Sensation and Perception

Margaret W. Matlin 1988 This book sets the standard in bringing technical scientific information on the subject of sensation and perception to a wide audience with outstanding readability and thorough coverage. Retaining its traditionally clear and accessible writing style, this new edition boasts a thoroughly revised art program and over 1,300 new references. The motion chapter now focuses solely on visual motion perception, so it appears earlier in the book. In addition, the book includes thirteen "In-Depth" sections, each of which explore a current "hot" research topic to provide a sense of how researchers ask questions with subjects varying from the role of face recognition in eyewitness testimony to phantom limb perception.

Lifespan Development in Context Tara L. Kuther

2018-01-02 Award-winning author Tara L. Kuther presents Lifespan Development in Context, a topically organized version of her bestselling Lifespan Development text that provides a panoramic view of the many influences that shape human development. Kuther's student-friendly narrative illustrates how the places, sociocultural environments, and ways in which we are raised influence who we become and how we grow and change throughout our lives. Three core themes resonate throughout each chapter: the centrality of context, the importance of research, and the value of applied developmental science. Foundational theories and classic studies are combined

with contemporary research and culturally diverse perspectives for a modern introduction to the field that is both comprehensive and concise. Visual overviews, case studies, and critical thinking questions encourage self-reflection and class discussion, ensuring students have the tools they need to apply course concepts to their lives and future careers.

Designing with the Mind in Mind Jeff Johnson 2013-12-17
In this completely updated and revised edition of *Designing with the Mind in Mind*, Jeff Johnson provides you with just

enough background in perceptual and cognitive psychology that user interface (UI) design guidelines make intuitive sense rather than being just a list of rules to follow. Early UI practitioners were trained in cognitive psychology, and developed UI design rules based on it. But as the field has evolved since the first edition of this book, designers enter the field from many disciplines. Practitioners today have enough experience in UI design that they have been exposed to design rules, but it is essential that they understand the psychology behind the rules in order to effectively apply them. In this new edition, you'll find new chapters on human choice and decision making, hand-eye coordination and attention, as well as new examples, figures, and explanations throughout. - Provides an essential source for user interface design rules and how, when, and why to apply them - Arms designers with the science behind each design rule, allowing them to make informed decisions in

projects, and to explain those decisions to others - Equips readers with the knowledge to make educated tradeoffs between competing rules, project deadlines, and budget pressures - Completely updated and revised, including additional coverage on human choice and decision making, hand-eye coordination and attention, and new mobile and touch-screen examples throughout
