Readiness Level of Engineering Freshman Students in College Physics Liberty Gay Manalo 2016-08-25

Research Paper (postgraduate) from the year 2015 in the subject Guidebooks - School, Education, Pedagogy, Rizal Technological University, language: English, abstract: This study aims to find out the readiness level of engineering freshman students in college physics at Rizal Technological University of the academic year 2013-2014. The descriptive method through correlational survey technique was used in the study. Percentage, analysis of variance and spearman rank correlation coefficient was used to analyze the data and the readiness level of the respondents was categorized based on DepEd Order No. 73, 2012. Results of the study showed the level of proficiency of the respondents in high school physics is proficient, developing in college algebra, plane and spherical trigonometry and in Hewitt's basic content in physics. No significant variations in the college physics performance of respondents when grouped according to profile variables. A negative correlation between the respondents' performances in Hewitt's Basic Content Physics Test and a positive correlation in college algebra. The positive correlation between the respondents' performances in Hewitt's Basic Content Physics Test and in plane and spherical trigonometry with a computed ρ -value of 0.12 is found to be significant at 0.05 level. Based on the findings, researchers recommended to identify other factors that might affect students' readiness in college physics aside from the variables used in the study.

Data Analytics Approaches in Educational Games and Gamification Systems Ahmed Tlili 2019-09-10

Game-based learning environments and learning analytics are attracting increasing attention from researchers and educators, since they both can enhance learning outcomes. This book focuses on the application of data analytics approaches and research on human behaviour analysis in game-based learning environments, namely educational games and gamification systems, to provide smart learning. Specifically, it discusses the purposes, advantages and limitations of applying such approaches in these environments. Additionally, the various smart game-based learning environments presented help readers integrate learning analytics in their educational games and gamification systems to, for instance, assess and model students (e.g. their computational thinking) or enhance the learning process for better outcomes. Moreover, the book presents general guidelines on various aspects, such as collecting data for analysis, game-based learning environment design, system architecture and applied algorithms, which facilitate incorporating learning analytics into educational games and gamification systems. After a general introduction to help readers become familiar with the subject area, the individual chapters each discuss a different aim of applying data analytics approaches in educational games and gamification systems. Lastly, the conclusion provides a summary and presents general guidelines and frameworks to consider when designing smart game-based learning environments with learning analytics.
