The Plastic Effect Polly A. Bauer 2012-12-14 WINNER 2013 ~ INDEPENDENT PUBLISHER LIVING NOW BOOK AWARD ~ GOLD MEDAL for best book in Finance/Budgeting. "The Living Now Book Awards celebrate the innovation and creativity of newly published books that enhance the quality of our lives and publicize the importance of these books to readers ." Do you have a credit card? Roughly 70% of adults in the U.S. do. In fact, Americans average 3.5 credit cards per person - that's a lot of plastic! Even with all that buying power in their wallets, most consumers have no idea the ways that they use (or misuse) their credit cards can affect their health, their relationships, and their credit scores. Many factors go into mounting credit card debt: impulse shopping, health emergencies, the loss of a job, marriage, divorce, a death in the family. With this debt comes stress, arguments, loss of sleep, inability to pay other bills, worry, health problems, crumbling relationships. Does any of this sound familiar? Increasing credit card debt and a lack of knowledge about how credit cards really work have created a new social phenomenon called The Plastic Effect. And if you have a credit card, The Plastic Effect can affect YOU. In this new book, internationally recognized credit card expert, Polly A. Bauer, CPCS and attorney Stephen Lesavich, PhD, JD, have selected 25 of the most common urban legends influencing the use and misuse of credit cards. The authors, as business leaders and credit card experts, walk you through these urban legends about how credit cards are used and misused, explaining what is true and what is likely to cause you trouble. You will get access to resources and additional information about each myth, tips from industry experts, and guidance that will help you use your credit cards more intelligently and effectively. You'll also learn how to understand your credit reports, improve your credit score and manage your debt in a way that puts the power back in YOUR hands. In short, this book will help you break free of The Plastic Effect."

Vulnerabilities in First-Generation RFID-Enabled Credit Cards Thomas S. Heydt-Benjamin 2015 The conveniences of RFID-enabled credit cards also lead to new risks for security and privacy. Traditional (magnetic stripe) credit cards require visual access or direct physical contact for retrieving information, such as the cardholder's name and the credit card number. By contrast, RFID-enabled credit cards make these and other sensitive pieces of data available using a small radio transponder that is energized and interrogated by a reader.

Introduction to Surveillance Studies J.K. Petersen 2012-10-12 Surveillance is a divisive issue—one might say it is inherently controversial. Used by private industry, law enforcement, and for national security, it can be a potent tool for protecting resources and assets. It can also be extremely invasive, calling into question our basic rights to freedom and privacy. *Introduction to Surveillance Studies* explores technological trends, past- and present-day rationales for surveillance and surveillance devices, and current social issues surrounding them. The book begins with a brief historical perspective on the evolution of surveillance technologies, then charts the development of modern-day devices from the invention of radar to the dawn of the Internet. Next, it describes emerging technologies—including GIS, GPS devices, Google Maps, biometric technology, surveillance cameras, global satellites, miniaturization of devices, and social media—that are challenging notions of privacy and the right of access to information. While focusing on the technology, the book also discusses surveillance as a phenomenon and what these technologies mean to our understanding of freedom, privacy, and the impact of technology on communications and the structure of

society. Enhanced with numerous photos, the book presents the pros and cons—and some of the controversy—of these increasingly sophisticated technologies, their collective impact, and what the future may hold. It is ideal for those new to surveillance; security, military, and law enforcement professionals who utilize surveillance technologies; and students of privacy, constitutional freedom, journalism, and sociology.

Mm-wave EM-imaging Chipless RFID System Mohammad Zomorodi 2015 A new mm-wave imaging chipless RFID system is proposed. The system comprises a multi-bit tiny chipless RFID tag, a double sided printed dipole array (DSPDA) as the reader antenna and the synthetic aperture radar (SAR) image processing algorithm. The multi-bit tags comprise a series of meander line and strip line polarizers on a paper substrate. A linearly polarized (LP) incident wave illuminates the tag surface at 60 GHz instrumentation scientific and medical (ISM) band. The DSPDA is a four-element linear array of DSPD elements. One DSPDA illuminates the tag in vertical polarisation and another DSPDA receives the backscattered signal in horizontal polarisation. The backscattered signal in the cross-polar radar cross section (RCS) of the tag contains the data contents. The reader synthetically processes the cross-polar RCS to construct the image of the tag surface. This data is decoded in the reader's synthetic aperture radar (SAR) processor. The developed mm-wave imaged tag is immune to noise and interference due to its cross polar nature of data processing. Since the tag does not operate on the frequency signature based principle as is for its predecessor tags, the new imaged tag provides high data capacity, compact design and immunity to printing errors. The advantage of the cross-polar RCS data encoding over the conventional co-polar RCS data encoding is analysed and then verified through a series of experiments in different practical scenarios such as tags attached: (i) to an object in cluttered and interfering environments; (ii) on liquid containers; (iii) on metallic surfaces such as aluminium cans; and finally, (iv) the tag is covered with thick paper, plywood and cardboard and read at non-line-of-sight (NLOS) conditions. Moreover, the radius of curvature of a bent tag is thoroughly investigated attaching the tag on tubes with varying radii. The proposed tag demonstrates robustness toward multipath and clutter interferences, provides a very reliable approach to tagging of bent surfaces and highly reflective items such as water bottles and aluminium cans. Moreover, the mm-wave tag can be read NLOS inside envelopes, cardboard and wooden boxes hence secure item tagging is also feasible in this approach. The achieved data encoding capacity of the tag is 2 bits/cm² which is very promising for industrial applications. A credit card size tag offers more than 90 bits of data. This content capacity can be increased further with addition of range resolution image processing of the tag surface. The requirement for relative movement of the reader with respect to the tag is also addressed with a new multiple input multiple output (MIMO)-based SAR technique. A limited number of fixed transmit and receive antennas is design based on the MIMO theory to provide a fast imaging processing for the proposed mm-wave EM-imaging chipless RFID system. The MIMO signal processing results in significant throughput enhancements in terms of tag reading time and least hardware requirement.

Towards a Lightweight, Secure, and Untraceable RFID Authentication Protocol Sviatoslav Edelev 2015 This dissertation tackles the problem of user privacy and security of transactions in the authentication protocols of the technology of Radio-frequency identification (RFID). Radio-frequency identification is ubiquitously used for automatic identification of objects over the distance. Numerous applications include access control using contactless ID cards, contactless payments in the public transportation, payments using contactless credit cards, toll payments, etc. To identify an item, RFID tags are used. In several other applications, mostly for automatic checkout and fraud control, tags ...

Rfid: Applications, Security, And Privacy Simon Garfinkel 2006-09

RFID Security Frank Thornton 2006-05-25 RFID is a method of remotely storing and receiving data using devices called RFID tags. RFID tags can be small adhesive stickers containing antennas that receive and respond to transmissions from RFID transmitters. RFID tags are used to identify and track everything from food, dogs, beer kegs to library books. RFID tags use a standard that has already been hacked by several

researchers. RFID Security discusses the motives for someone wanting to hack an RFID system and shows how to protect systems. Coverage includes: security breaches for monetary gain (hacking a shops RFID system would allow a hacker to lower the pricing on any product products). How to protect the supply chain (malicious/mischievous hackers can delete/alter/modify all identifying information for an entire shipment of products). How to protect personal privacy (privacy advocates fear that RFID tags embedded in products, which continue to transmit information after leaving a store, will be used to track consumer habits). The purpose of an RFID system is to enable data to be transmitted by a portable device, called a tag, which is read by an RFID reader and processed according to the needs of a particular application. The data transmitted by the tag may provide identification or location information, or specifics about the product tagged, such as price, colour, date of purchase, etc. . * Deloitte & Touche expects over 10 billion RFID tags to be in circulation by the end of 2005 * Parties debating the security issue of RFID need information on the pros and cons of the technology and this is that information * Little competition in a market desperate for information

Hacking Wireless Access Points Jennifer Kurtz 2016-12-08 Hacking Wireless Access Points: Cracking, Tracking, and Signal Jacking provides readers with a deeper understanding of the hacking threats that exist with mobile phones, laptops, routers, and navigation systems. Let'S Stop "Killing" Our Children Philip S. Chua MD FACS FPCS 2011-08-25 Book Review Author Advocates Healthy Lifestyle and Disease Prevention to start from the Womb and dieting to begin in the Crib New Health Book, written in easy-to-understand laymans term, provides thought-provoking and valuable health reference designed to change lives of individuals and society as a whole through good pre-emptive and proactive social initiatives and more responsible parenting for healthy lifestyle and disease prevention, which the cardiac surgeon author says must start in the womb and safe dieting should begin in the crib, to maximize their full potential in achieving their goals. XLIBRIS - (PRWEB) August 29, 2011 What is the best strategy to prevent diseases? Cardiac Surgeon Emeritus in Northwest Indiana Dr. Philip S. Chua attempts to provide resolution to this issue as he presents Lets Stop Killing Our Children, a valuable, inspiring, and innovative 794-page health guide that focuses on disease prevention starting from ground zero, and highlights the fundamental obligation parents and society have in teaching children how to life a healthy lifestyle by setting good examples early on. This revolutionary concept puts the onus squarely on society, parents and guardians of young children, who are totally at the mercy of society and of these adults, whose good or bad examples, habits and behaviors will inevitably be emulated by the children. It is in the first five formative years of the children and up to age 12 when instilling proper discipline and behavioral modification are most effective, states this heart surgeon. Almost all diseases known to man are self-induced and are, therefore, preventable Most of us seemed to have unwittingly programmed our mindset and behavior to a self-destruct and slow-suicide mode this negative surrender and fatalistic attitude are what this book aims to change, Dr. Chua critically pointed out in his book. An international health advocate

and writer, Dr. Philip S. Chua, in this book of information, philosophy and principles, poses this great challenge to society as a whole in his belief that most diseases known to man are self-induced through self-abuse. It is important that both society as a whole and parents play their essential role of doing what is right for the children, way before age 5 to save these young lives from avoidable morbidity and premature death as they grow to middle age and beyond. After all, says Dr. Chua, the race does not start in the middle. The author points out that autopsy findings on children, as young as 4-5 who were victims of accidents, already had evidence of arteriosclerosis (hardening of their arteries) which we see in adults we must be doing something wrong. "Are we losing the war on diseases because we are starting late and lagging far behind in this race?" ponders the cardiac surgeon. Dr. Chua, in his book, strongly suggests for parents and society as a whole to practice this novel pre-emptive and proactive health concept even before conception to achieve a healthier family, a healthier citizenry, and thus a healthier nation. "Since, we have not really significantly succeeded in our war against many diseases over the past half a century, the medical community and society as a whole need to seriously re-evaluate of our current conventional strategy in dealing with health and disease prevention, if we are to contain, if not eradicate, the common diseases afflicting man around the world today, including hypertension, obesity, diabetes, heart disease, stroke, and even cancer," admonishes the author. This pre-emptive health strategy could forever change the role of parents and society in our quest for health, well-being, happiness, and longevity. This challenging and stimulating coffee-table book of wisdom is a must-read. Every home deserves one.
